System Features

Pediatrics360 offers many important features such as:

Instant access to real-time patient data

- Enter patient clinical information, notes and medication/dosages
- See allergy notifications in the electronic health record (EHR) system automatically
- Place orders for lab work and radiology, as well as view results with easy-to-read notes

Integrated clinical records

- Integrated patient record that shows history and results from patients' visits to participating providers, including hospitals, specialists and pediatricians
- Incorporates electronic lab orders and results (Quest, Labcorp or Sunquest) and Children's-owned radiology orders and results into the patient record

Independent practice records

- Keep practice financial data private and secure
- Registration, scheduling and billing information is conveniently accessed and stored solely within your practice files

Patient access

- "MyChart" enables secure electronic communication between patients and physicians; grants patient access to test results and online schedule requests
- Minimal fee charged to grant access to patients not already in the system; additional patient support (e.g. password resets) is provided at no additional cost
- Patient's control is enhanced with ability to view personal health records

Planning and ongoing technical support

- Create users and access levels (physicians, clinical and office staff)
- Set up clinical tools, documentation templates and management reports
- Consult with practice regarding hardware specifications and options
- Assist practice in understanding privacy and security requirements
- Train physicians, clinical and office staff
- On-site support during go-live and monthly visits

Greater coordination for your practice

- Send prescriptions electronically
- Send lab and radiology orders electronically to Children's systems, Quest and LabCorp
- Reduce time spent calling to request charts, verify patient information or follow up on results
- Improve practice management with a streamlined charge capture process

Patient benefits

- Better communication between physicians, as well as with patients
- Potential for decreased risk of medication and other errors
- Access to a more complete medical history can promote better outcomes
