

Pinkeye

Patient and Family Education

What is pinkeye?

Pinkeye (conjunctivitis) is an eye condition caused by bacteria, a virus, an allergic reaction or chemicals. If it is caused by a bacteria or virus, it is very contagious (can be caught easily). It is not contagious if an allergic reaction or chemicals cause it.

NOTE: Babies less than 8 weeks old must be seen by their doctor for any eye redness, swelling or drainage.

What are the possible symptoms?

Your child may have one or more of these symptoms:

- Watery eyes
- Itchy eyes
- Redness in the whites of the eyes
- Puffy eyelids
- Drainage from the eyes, sometimes yellow or green
- Eyes may be crusted shut with dry drainage after sleeping

Your child may also have a cold with a fever, runny nose and congestion.

What is the treatment?

Your child's doctor will talk with you about specific care for your child. Some general guidelines to follow include:

- Remove eye drainage and crusting with a warm washcloth or cotton ball. Use a fresh cloth or ball for each eye.
- Wipe from the inside corner of the eye (near the nose) to the outside.
- ***If your child wears contact lenses, switch to eyeglasses until the eyes are better.***
- If your child needs it, the doctor may order medicine to be put in the eye or to be taken by mouth.

How do I put in the eye drops?

1. Wash your hands well before and after using eye drops.
2. Lay your child down or tip his head back.
3. Gently pull the lower eyelid down and put the eye drops in the "pocket" formed.
4. Be careful not to touch the tip of the medicine dropper to the eye.

How do I put in the eye ointment?

1. Wash your hands well before and after using ointment.
2. Lay your child down or tip his head back.
3. Gently pull the lower eyelid down and place a thin line of ointment along the length of the lower lid. Ointment will cause blurred vision for a short time.
4. Be careful not to touch the tip of the medicine tube to the eye.

Do not share eye drops or eye ointment between family members unless your child's doctor says you can.

In case of an urgent concern or emergency, call 911 or go to the nearest emergency room right away.

This is general information and is not specific medical advice for your child. Always consult your child's doctor or other healthcare provider if you have any questions or concerns about the care or health of your child. A Children's Healthcare of Atlanta pediatric advice nurse is available 24 hours a day at 404-250-KIDS.

Pinkeye, continued

How can I prevent the spread of infection?

- Wash your hands often, especially before and after touching your child's eyes.
- Do not share towels, pillows or washcloths with others.
- Wash bed linens in hot water.

How long is my child contagious?

Your child can return to school as your child's doctor directs.

When should I call the doctor?

Call your child's doctor if your child:

- Is not better after three days on the medicine.
- Has more swelling, redness or pain of the eyes.
- Has more redness of the skin around the eyes, including the eyelids.
- Has a fever (temperature over 100.3°F orally or rectally).
- Has blurred vision (except for the short time after the eye ointment is applied).

Also call if you have any questions or concerns about how your child looks or feels.

In case of an urgent concern or emergency, call 911 or go to the nearest emergency room right away.
