Resources

Patient family resources

404-785-KIDS (5437)

This number is the primary point of contact for patient families. This phone number, staffed by a team of experienced Children's Healthcare of Atlanta representatives, is open 24 hours a day, seven days a week. Patient families can use **404-785-KIDS (5437)** to:

- Access Children's services.
- Schedule and change appointments.
- Reach a physician or department at Children's.

MyChart

MyChart gives you, your patients and their legal guardians access to a portion of their Epic medical record. It also enables you and your patients to communicate through a secure online portal or mobile device. With MyChart, your patient families can be more informed, which can lead to improved satisfaction and outcomes. Patient families can:

- View immunization records.
- View lab and other test results and get notifications when most results are received.
- Request prescription refills.
- Communicate with you by sending and receiving secure messages.

Patient families should visit mychart.choa.org to activate a MyChart account.

Choa.org

Patient families can use the Children's website to:

- Learn more about our medical services and physicians on our medical staff.
- Find information, including hours and directions to specific locations.
- Prepare for visits and overnight stays.
- Request copies of medical records.
- Contact our team with questions about billing and insurance.

Mobile app

The Children's app is designed to give families easy access to the things they need most from Children's.

With the Children's app, patient families can:

- Access the MyChart Patient Portal which allows them to pay their bill online, communicate with their child's doctor, manage their child's appointments, complete forms, receive reminders, and access test results and records.
- View amenities and services available during their visit.
- Find care, check wait times, get directions, find the nearest Children's Emergency Department or Urgent Care Center, and look up physicians on Children's medical staff.

Children's locations

Children's offers urgent care, X-ray, lab and emergency services at the following locations:

1. Arthur M. Blank Hospital

2220 North Druid Hills Road NE
Atlanta, GA 30329
Walk-in lab and walk-in X-ray

2. Hughes Spalding Hospital

35 Jesse Hill Jr. Drive SE
Atlanta, GA 30303
Walk-in X-ray

3. Scottish Rite Hospital

1001 Johnson Ferry Road NE
Atlanta, GA 30342
Walk-in lab and walk-in X-ray

4. Children's at Chamblee-Brookhaven**

In the Parkview on Peachtree shopping center
5080 Peachtree Blvd., Suite 100
Chamblee, GA 30341
Urgent care

Children's Healthcare of Atlanta at Hughes Spalding es propiedad de Fulton-DeKalb Hospital Authority y es dirigido por HSOC Inc., institución asociada a Children's.

Physician resources

As one of the largest pediatric healthcare systems in the country, Children's offers a variety of ways for physicians to reach our staff and clinical services. Visit choa.org/md for more information about these services as well as access to our online forms, clinical practice guidelines and more.

accessCHOA

AccessCHOA is the web-based interface for the Children's electronic health record system. It provides customized notifications about patient events, which can be forwarded to anyone in your practice. In addition, you can use it to:

- Place an order for outpatient diagnostics and rehabilitation.
- Place referrals to Children's Physician Group specialists and specialty clinics.
- View notifications about key patient events, including admissions and discharges, emergency visits, and lab and imaging results.
- Check appointment status and patient scheduling information. AccessCHOA is the primary way your practice will receive patient information. To enhance patient confidentiality, Children's will eventually eliminate faxing patient information to your practice.

Ask your physician liaison or visit [accessCHOA.org](https://accesschoa.org) to register and review educational resources. See the Tools section for a tip sheet about accessCHOA.

404-785-DOCS (3627)

Children's strives to reduce barriers for accessing healthcare services. By using this easy-to-remember phone number, physicians can connect to anyone or any service within our organization.

404-785-DOCS is staffed 24 hours a day, seven days a week by a team of experienced Children's representatives who will promptly answer your call, evaluate your needs, provide the services requested or route you to the appropriate area.

Call **404-785-DOCS (3627)** to:

- Access any Children's service.
- Reach a hospitalized patient, Children's employee or department at Children's.
- Assist in scheduling a patient appointment or ancillary test.
- Refer a patient to a Children's Physician Group practice.
- Speak to a Children's Physician Group provider for collaboration or advice during business hours through our physician-to-physician service.

Transfer Center

The Children's Transfer Center can arrange for the acceptance and admission of your patient with one phone call, 24 hours a day, seven days a week. We can help:

- Coordinate ground or air transportation for your patient.
- Arrange for a bed with the appropriate level of care to be ready upon arrival.
- Initiate registration paperwork, including financial information and pre-certification.

Call **888-785-7778** or **404-785-7778** to reach our Transfer Center.

Scheduling elective admissions:

If you need to schedule an admission to Children's and you do not have attending privileges, the Children's Hospitalist Program can assist you with:

- Telephone consultations.
- Inpatient management services.
- Outpatient diagnostic referrals.
- Specialist referrals.

See the Tools section for our Emergency Department transfer guidelines.

Telehealth

The Telehealth Program at Children's allows our pediatric specialists to provide care remotely to your patients through the use of technology when it is clinically safe and appropriate to do so.

Telehealth uses two-way interactive video over a secure, HIPAA-compliant network. Telehealth visits with Children's can take place in the comfort of a patient's home or at another private location.

Refer your patient for an in-person visit with a Children's pediatric specialist. Our team will determine whether a telehealth visit is appropriate. Patient families may ask their provider if a telehealth appointment is a suitable option for their next visit.

Physician outreach

A physician liaison is your primary contact for questions, concerns and issues. Physician liaisons help with:

- Barriers to access.
- In-services.
- Order forms or materials.

To learn more visit choa.org/outreach.

Meet our liaisons

Blair Boone, Physician Liaison

Regions: Atlanta, Clayton, Henry, Rockdale
blair.boone@choa.org or 404-718-9426

Regions: Cobb, Douglas
brittney.stephens@choa.org or 404-713-5871

The Children's Care Network (TCCN)

The Children's Care Network (TCCN) is a clinically integrated partnership between Children's and community physicians designed to help facilitate better health outcomes for our patient population. The collaborative system also offers group purchasing power, cost savings and technical resources.

To find out more about our clinically integrated network, email contact@tccn-choa.org, call **404-785-7935** or visit tccn-choa.org.

Children's Physician Group

About us

Children's Physician Group is one of the largest multispecialty pediatric physician practices in the Southeast. With convenient locations at our three hospitals and multiple neighborhood locations in Atlanta and surrounding communities, our pediatric-trained doctors and surgeons represent the following specialties.

Pediatric specialties

- Allergy and immunology
- Anesthesia
- Apnea
- Cardiothoracic surgery
- Child advocacy
- Critical care
- Cystic fibrosis (CF)
- Dentistry and orthodontics
- Emergency medicine
- Endocrinology
- Gastroenterology
- General surgery
- Gynecology
- Hematology/oncology
- Hepatology
- Hospitalists
- Infectious diseases
- Interventional radiology
- Neonatology
- Nephrology
- Neurology
- Neuropsychology
- Neurosurgery
- Nutrition
- Orthopaedics and sports medicine
- Otolaryngology
- Pathology
- Physiatry
- Plastic surgery and craniofacial
- Pulmonology
- Radiology
- Rheumatology
- Sedation services
- Sleep
- Transplant

Multispecialty clinics

Children's Physician Group providers also participate in several multispecialty clinics, including:

- Aerodigestive
- Brachial Plexus
- Cerebral Palsy
- Cerebrovascular Disorders
- Chronic Kidney Disease
- Chronic Pain
- Concussion
- Craniofacial Feeding
- Craniofacial Speech
- Developmental Neurology
- Developmental Progress
- Differences of Sex Development
- Epilepsy/Ketogenic Diet
- Genetics
- Hypertension
- Infantile Spasms
- Leukodystrophy
- Medically Complex
- Muscular Dystrophy
- Neuro Metabolic
- Neuro Spine
- Neurofibromatosis
- Neurogastroenterology and Motility
- Neuromuscular
- New-Onset Seizure
- Osteogenesis Imperfecta
- Pelvic and Anorectal
- Spasticity
- Spina Bifida
- Strong4Life
- Technology Dependent
- Tuberous Sclerosis
- Vagus Nerve Stimulation
- Vascular Anomalies

Visit choa.org/cpg for additional information about our specialties and clinics.

Physician-to-physician service

Physician-to-physician is a service offered through **404-785-DOCS (3627)**. The goal of this service is to provide you with improved access to Children's Physician Group practices during business hours. A designated provider for participating Children's Physician Group practices is available Monday through Friday from 8 a.m. to 5 p.m., excluding holidays, to respond to your non-urgent clinical inquiry.

Physician-to-physician consultations should be requested when you need to speak with a subspecialist for advice about a patient. It should not be used for questions that do not require a subspecialist physician, such as lab results or appointment scheduling.

Enhancements

To improve your experience with our physician-to-physician service and better meet your needs, we have made the following enhancements:

- **Non-urgent, established patients:** Our turnaround time has been designated to 24 hours.
- **Urgent, established or non-established patients:** Our turnaround time has been designated to 60 minutes. In more than 60% of cases, you will be connected directly with a subspecialist.
- **Escalation:** If you do not receive a call back in the designated time frame, call 404-785-DOCS (3627) and your call will be escalated to practice leadership.

Refer a patient

At Children's, we want to make it easy for you to submit a referral to our pediatric specialty practices.

To refer a patient, use one of the following methods:

- **accessCHOA:** AccessCHOA is a free, secure, web-based electronic health record system that provides physicians the ability to electronically submit referrals to Children's Physician Group specialists. It also provides instant access to your patients' information, customized notifications about patient events, and the ability to view the referral status and results.
- **choa.org/referral:** Visit the Children's website for access to the Children's Physician Group online referral form. Upload relevant clinical documents, patient demographics and imaging/diagnostic tests with the click of a button.
- **Fax:** See the Forms section for a hard copy of the Children's Physician Group referral form. Completed forms may be faxed to **404-785-9111**.

See the Contact information section for a listing of Children's Physician Group ambulatory specialties, physicians and locations.

Forms

Referral and Order Forms

accessCHOA

Reminder: The fastest way to submit your order or referral is electronically, using accessCHOA.

AccessCHOA is the web-based interface for the Children's electronic health record system. It can be used to place an order for outpatient diagnostics and rehabilitation as well as for referrals to Children's Physician Group specialists*. To learn more, see Page 4 of this guide or go to the Tools section for a tip sheet on using accessCHOA.

If you are not connected to accessCHOA, some online referral forms and order forms can be submitted electronically at choa.org/md.

Our forms

Children's Physician Group: Provider referral form

Cardiac:

- Cardiac Risk Assessment form
- Cardiology referral form
- Pulmonary Hypertension Clinic referral form

Child advocacy: Stephanie V. Blank Center for Safe and Healthy Children request for services form

Concussion: Downtime mild traumatic brain injury and concussion assessment criteria tool

Lab: Outpatient requisition form

Orthopedics and sports medicine: Patient referral form

Radiology

- Advanced pediatric imaging form
- Pediatric imaging form
- Interventional radiology form

Rehabilitation: Rehabilitation services order form

Rheumatology: Referral form

Sleep: Sleep disorders lab order form

Sports medicine: Order form

Synagis: Enrollment form

Children's Physician Group

Children's
Healthcare of Atlanta

Provider referral form

Complete this form and fax it to 404-785-9111. Use one form for each patient.

If your patient's condition warrants a clinic visit within the next week or a potential hospitalization, contact our Physician-to-Physician service at 404-785-DOCS (3627) to receive input from one of our pediatric subspecialists prior to completing this form.

Electronic Referral Options

(EPIC or accessCHOA access required - no fax needed)

Option 1: Evaluate and Treat

Cardiology Referral - 99002070MO

*accessCHOA users can attach records to the electronic order

Option 2: Test Only

____ EKG Order - 22000001MO CHR EKG – Children's Cardiology Clinic

____ Echocardiogram Order - 99002151 CHR ECHOCARDIOGRAM –
Children's Cardiology Clinic

Option 1: Evaluate and Treat ☐

**Fax demographic sheet, clinical notes or other records needed
for the appointment, with referral to 404-252-7431**

Diagnosis: (Check all that apply for full evaluation by Cardiologist)

- | | |
|------------------------------|--|
| ____ Chest pain | ____ Cyanotic Episodes |
| ____ Syncope/lightheadedness | For DX below, send information as indicated: |
| ____ Palpitations | ____ Hypertension (Send prior BP readings) |
| ____ Tachycardia | ____ Hyperlipidemia (Send most recent labs) |
| ____ Cardiac Clearance | ____ Abnormal ECG (Send previous ECG) |
| ____ Murmur | ____ Other _____ |

Option 2: Test Only ☐

Orders must be received before a test can be performed:

Fax this order to 404-252-7431.

Patient will NOT see a Cardiologist

Diagnosis _____

Reason for Study _____

- ____ ECG (Need previous ECG if available)
- ____ Echocardiogram
- ____ Extended ECG Rhythm Patch - (0-48 hours)
- ____ Extended ECG Rhythm Patch - (3 days-7 days)
- ____ Extended ECG Rhythm Patch - (8 days-14 days)

Cardiology Referral Form. 8/2022

Children's Cardiology

Pediatric Cardiac Risk Assessment Form

Children'sSM
Healthcare of Atlanta
Cardiology

Please complete this form for all children (athletic participant or not) starting at the age of 6, when the American Academy of Pediatrics recommends starting preparticipation examinations (PPE). It should be completed a minimum of every 3 years, including on entry into middle school and high school. Depending on family and primary care provider concerns, more frequent or earlier screening may be appropriate.

Age: _____

Person Completing Form: _____

Date: _____

Symptom Questions:	Yes	No	Unsure
Have you (patient) ever fainted, passed out, or had an unexplained seizure suddenly and without warning?			
If so, was it during exercise or in response to sudden loud noises, such as doorbells, alarm clocks, or ringing telephones?			
Have you (patient) ever had either of the following during exercise : 1. Exercise-related chest pain, particularly pressure-like and not occurring at rest? 2. Unusual or extreme shortness of breath during exercise, not explained by asthma?			
Family History:	Yes	No	Unsure
Are there any immediate family members (include patient's parents or siblings) who have died before age 50 from heart problems or had an unexpected sudden death? <i>Including drownings, passing away in their sleep, sudden infant death syndrome (SIDS), or unexplained automobile crashes in which the relative was driving.</i>			
Are there any immediate relatives (patient's parents or siblings) with the following conditions?			
<input type="checkbox"/> Hypertrophic cardiomyopathy or hypertrophic obstructive cardiomyopathy (HCM/HOCM) <input type="checkbox"/> Long QT syndrome (LQTS) or short QT syndrome <input type="checkbox"/> Marfan syndrome or Loeys-Dietz syndrome <input type="checkbox"/> Arrhythmogenic right ventricular cardiomyopathy (ACM) <input type="checkbox"/> Catecholaminergic polymorphic ventricular tachycardia (CPVT) <input type="checkbox"/> Brugada syndrome (BrS) <input type="checkbox"/> Anyone younger than 50 years old with a pacemaker or implantable defibrillator? <input type="checkbox"/> <i>I have no known immediate family members with the above conditions.</i>			
Please explain more about any "yes" answers here:			

Revised 07.21.2022

Child Advocacy

Children's
Healthcare of Atlanta

Primary Care Provider (PCP) Referral

Stephanie V. Blank Center for Safe and Healthy Children

Child advocacy center and a department of Children's at Scottish Rite Hospital

PLEASE FILL OUT COMPLETELY

Date of request: _____

Please note: PCPs are only able to request forensic medical exams.

Practice and Physician/Provider Name: _____

Are you requesting a forensic medical exam? Yes ____ No ____

Is law enforcement involved? Yes ____ No ____

Jurisdiction: _____ Case Number: _____

Is DFCS involved? Yes ____ No ____ County: _____

If there is a suspicion of child abuse, a report to DFCS is required by law.

Report by dialing: 1-855-GA-CHILD or 1-855-422-4453

(Reporting to the SVB Center does not satisfy mandated reporting requirements)

Victim's Data

Victim's Legal Name: _____ Date of Birth: _____ Age: ____

Gender: ____ Male ____ Female Race: _____ Language: _____

Victim's Address: _____ City / ZIP: _____

County: _____

Parent/Legal Guardian Name: _____

Parent/Legal Guardian Date of Birth: _____

Relation to Victim: _____

Phone: (H) _____ (C) _____

Any known special needs/developmental delays?

Allegations

Sexual abuse ____ Physical abuse ____ Neglect ____

FOR SEXUAL ABUSE (Please indicate ALL that apply):

Fondling ____ Digital-vaginal ____ Digital-Anal ____

Oral-Vaginal ____ Oral-Penile ____ Penile-Vaginal ____ Penile-Anal ____

DESCRIPTION OF ALLEGED ABUSE:

For all concerns, please be specific regarding what is being reported. This will greatly assist our ability to serve clients adequately and promptly.

Date of Last Contact with Alleged Perpetrator: _____

Location of Abuse: _____

County: _____

Has child had a medical exam regarding allegation?

Yes ____ No ____ Date of exam: _____

Name of physician: _____

Location: _____

Medical findings: _____

Has this child completed a forensic interview (FI) regarding current allegations?

Yes ____ No ____ Date of FI: _____ Location of FI: _____

If yes, who conducted previous interview? _____

Alleged Perpetrator Information

Name: _____

Age: ____ DOB: _____

Relationship to Victim: _____

Race: _____

Gender: ____ Male ____ Female

Arrested: ____ Yes ____ No

Charges: _____

Fax completed form with a copy of **any progress notes / lab results / relevant information** to:

Injury Assessment

1. Complete Neuro Exam including Glasgow Coma Score:
2. **Abnormal** Physical findings?
 - a. Is there evidence of a forcible blow to the head (direct or indirect)? ☐ Direct ☐ Indirect ☐ Unknown
 - b. Is there evidence of intracranial injury or skull fracture? ☐ Yes ☐ No
 - c. Location of Impact:

☐ Frontal
☐ Left Temporal
☐ Right Temporal
☐ Left Parietal
☐ Right Parietal
☐ Occipital
☐ Neck
3. **Cause:** ☐ MVC ☐ Pedestrian-MVC ☐ Fall ☐ Assault ☐ Sports (specify) Other _____
4. Was the injury witnessed or un-witnessed? ☐ Witnessed ☐ Un-witnessed
5. **Amnesia:**
 BEFORE (Retrograde) Are there any events just BEFORE the injury that you/ your child have no memory of (even brief)?

 AFTER (Anterograde) Are there any events just AFTER the injury that you/ your child have no memory of (even brief)?
6. **Loss of Consciousness:** Did you/ your child lose consciousness? ☐ Yes, how long? _____ ☐ No
7. **EARLY SIGNS:** ☐ Appears dazed or stunned ☐ Is confused about events ☐ Answers questions slowly
☐ Repeats questions ☐ Forgetful (recent info)
8. **Seizures:** Were seizures observed? ☐ Yes ☐ No

Check all that apply (symptoms are subjective)

Office phone: _____ Office fax: _____

Referring provider's status with patient: ☐ PCP ☐ Not PCP

PCP name: _____ PCP phone: _____

Reason for referral (check all that apply):

- ☐ Joint pain and swelling ☐ Muscle weakness ☐ Recurrent fevers ☐ Rash
- ☐ Uveitis ☐ Abnormal labs ☐ Other: _____

Did you send relevant labs pertaining to this referral? ☐ Yes ☐ No

- If yes, are the results included with this form? ☐ Yes ☐ No

- If yes, are any lab results still pending at this time? ☐ Yes ☐ No

- List labs that are still pending: _____

Were imaging studies performed (X-ray, ultrasound, CT, MRI)? ☐ Yes ☐ No

- If yes, are the results included with this form? ☐ Yes ☐ No

- Have the patient bring a CD with images if they were not performed at a Children's Healthcare of Atlanta facility.

Did another physician or specialist recommend this referral? ☐ Yes ☐ No

- If yes, have all relevant clinic notes, labs and/or imaging study reports from the specialist been faxed? ☐ Yes ☐ No

- If you do not have records from the specialist, provide the following:

Specialist name: _____ Phone: _____

Checklist:

- ☐ Fax all appropriate records to our office prior to the patient's visit. This includes office visit notes, imaging studies (X-rays, MRI, etc.) and lab results. If lab results are pending at the time records are faxed, make sure the completed results are sent over when available.
- ☐ If the patient had imaging studies, ask the family to bring a disc with the images to their rheumatology appointment.
- ☐ If the patient has seen other specialists related to their symptoms, send these records to us as well.

Children's Healthcare of Atlanta Sleep Disorders Laboratory Order Form

Please print clearly

Child's name: _____ Sex: ☐ M ☐ F Child's DOB: _____

Children's MRN (if known): _____ Parent/Guardian's Name: _____

Address: _____

Primary phone: _____ Alt. Phone: _____ Email: _____

Preferred language: English _____ Spanish _____ Other: _____

Primary care physician (if not the ordering physician): _____

Source: ☐ Office ☐ TDPC ☐ Craniofacial ☐ MDA ☐ Sickle cell ☐ Other: _____

Previous study: ☐ No ☐ Yes If Yes: ☐ Children's Healthcare of Atlanta ☐ Other: _____

Reason for study: _____

List signs/symptoms, do not use "rule out," "probable," "suspected," etc.

ICD-10 Code (sleep related; required) Check all that apply: ☐ R06.83 (snoring) ☐ G47.33 (obstructive sleep apnea)

☐ G47.36 (hypoxemia) ☐ other(s) _____

Other medical problems: ☐ Down Syndrome ☐ ADHD ☐ Autism ☐ Sickle cell ☐ Tracheostomy ☐ Obesity

Insurance company: _____ Group/ID #: _____

Pre-certification/authorization number: _____

If pre-certification is required by insurance, please obtain and fax the authorization to us no later than one week before the test date.

Evaluation Requested: (for explanation, visit choa.org/sleep or call us)

☐ **Nocturnal Polysomnogram** (CPT code 95810 if > 6 yrs or 95782 if < 6 yrs of age)

This is a complete overnight study that includes sleep staging and respiratory parameters

☐ Check here if you would like us to order O2 (if needed) and provide consultation/follow up

☐ Cardiology patients: Provide the child's baseline/expected SpO2 _____

☐ **CPAP or Bi-level PAP titration** (CPT code 95811 if > 6 yrs or 95783 if < 6 yrs of age)

CPAP/BPAP titration order form required; a sleep medicine or pulmonology consult is recommended

☐ **Multiple Sleep Latency Test (MSLT)** (CPT code 95805)

Nap study for narcolepsy; must also order the Nocturnal Polysomnogram above

A sleep medicine consult is required before an MSLT unless previously evaluated by a neurologist

Special study requests and/or special needs of the child: _____

We will schedule the study at the Children's Sleep Laboratory that is best for the family and the parameters requested:

Arthur M. Blank Hospital Sleep Center Satellite Boulevard Sleep Center Scottish Rite Hospital Sleep Center

Interpreting group for this study (each of our sleep specialists can interpret studies performed at any location):

☐ Arthur M. Blank Hospital-based sleep physicians: Roberta Leu, Amit Shah, Daniel Torrez

☐ Scottish Rite Hospital-based sleep physician: Sophia Kim

The ordering physician must choose the interpreting group and send clinical notes before we can schedule the study.

Ordering physician signature: _____ Date: _____

Guidelines and tools

Guidelines

The following guidelines are meant to be general recommendations. If you have a specific question, call 404-785-DOCS (3627). Note, guidelines for additional specialties are in-progress and will be added as they are finalized.

- **Emergency:** Referring patients to a Children's Emergency Department
- **Endocrinology:** Guidelines for referrals
- **Endocrine and obesity:** A physician's quick guide
- **Gynecology:** Guidelines for referrals
- **Hematology/Oncology:** Guidelines for referrals
- **Nephrology:** Guidelines for referrals
- **Neurology:** Guidelines for referrals
- **Neuropsychology:** Guidelines for referrals
- **New-onset seizures:** Primary care guidelines
- **Radiology:** Sedation guidelines for CT and MRI
- **Rheumatology:** Guidelines for referrals

Referring patients to a Children's Emergency Department

Children's Healthcare of Atlanta believes effective communication between community pediatricians, urgent care physicians and our Emergency Department physicians is an important part of our shared goal to provide high-quality care to our patients. Before you transfer a patient, review the following information. This will help you and patient families better connect with our services. **Do not send patients to the Emergency Department if they do not have a true emergent need.**

If you feel as though your patient warrants a direct admission, call the Transfer Center and discuss the case with the hospitalist on call. The patient may be able to bypass a trip to the Emergency Department depending on the complaint, the acuity, the workup that has already been completed and the comfort level of the admitting team.

Step 1: Call the Transfer Center at 404-785-7778 or 888-785-7778.

We need to know:

- The patient's name, date of birth and sex.
- The patient's complaint and any other relevant medical, personal or other history.
- The patient's lab results. Send copies of all labs or verbally detail the lab values.
- Relevant workup that has been completed for the patient. The Emergency Department physician will review this information to avoid any duplication.
- Whether the patient needs air or ground transportation.
- Your cell phone or after-hours contact information for the Emergency Department physician to use if they have questions regarding the patient; direct cell phone numbers are preferred rather than practice numbers, because patient arrival and workup times may take place after hours.
- Whether you would like updates on your patient.

Step 2: Decide if you need to speak to an Emergency Department physician regarding an emergent patient.

We need to know:

- Your preferences or concerns regarding the patient.
- Your patient's specific symptoms and the disease process(es) you are concerned about.

Direct communication can help us better understand your specific concerns and your desired outcome for the visit. This may help to increase efficiency, enhance the patient experience and reduce unreasonable expectations.

Step 3: Advise the parents/guardians on next steps.

- To help set proper patient family expectations, advise families that they may not see a specialist in the Emergency Department. The Emergency Department physicians will determine if the patient's condition requires an immediate evaluation by a specialist. This is often not required. Emergency Department physicians will also determine if the patient needs diagnostic testing, admission, etc.
- Tell them to keep the child NPO if you anticipate there may be a need for sedation or anesthesia.
- They can download the Children's mobile app to get step-by-step directions to a Children's Emergency Department. This free app can be downloaded on a mobile device by searching for Children's Healthcare of Atlanta on Google Play or the App Store. Visit choa.org/app to learn more.
- Have them call **404-785-KIDS (5437)** if they have questions or need to reach their child's room after they have been admitted.

Following up on patients

- Check accessCHOA for updates on your patient or visit the physician portal to review clinical guidelines.
- If you need an update on a patient while they are in the Emergency Department, call the Transfer Center at **404-785-7778** or **888-785-7778**. Representatives will attempt to connect you with the patient's Emergency Department care provider.

Leadership team contacts

We're here to help. Contact us if you need to connect with our leadership team regarding the Emergency Department.

Frequently asked questions

At Children's, we are committed to helping physicians experience a smooth transition from patient care in our system through discharge to the patient's primary medical home.

Q: Does the Children's Transfer Center transfer patients to all Children's hospital campuses?

A: Yes, the Children's Transfer Center transfers patients to all Children's hospital campuses, including the Emergency Departments at Arthur M. Blank Hospital, Hughes Spalding and Scottish Rite.

Q: Who do I call if I am not certain the patient needs to be transferred and wish to consult with an on-call pediatric specialist?

A: If you feel your patient may need to be transferred and wish to consult with an on-call specialist, contact the Transfer Center anytime at **404-785-7778**. A registered nurse will assist you in coordinating this consult.

Q: What is the difference between the Transfer Center and 404-785-DOCS (3627)?

A: The Transfer Center, **404-785-7778**, assists physicians and outside facilities with transfers into our system. The Transfer Center helps with emergent patients and transport needs and consults on patients who need immediate or real-time interventions and guidance.

Our main physician line, **404-785-DOCS**, is not for Emergency Department patients. This contact number helps you connect to Children's services for non-urgent reasons during business hours without having to remember multiple numbers.

Q: Will I be contacted once my patient is discharged?

A: Yes. You will receive notification of patient discharge through fax. We are aware that this process needs improvement and will continue to look for ways to improve communication, specifically related to notifications of patient death. We welcome your feedback on how we can address your important concerns.

Q: How can I help make sure that I get an update about my patient?

A: Notify the Transfer Center that you would like an update from the emergency physician and be sure to leave your direct cell phone or after-hours phone number where you can be reached. On average, it takes patients two to three hours to arrive at the Emergency Department following your referral. Evaluation and test results may take an additional two hours.

Q: What if my patient wants to go to the Emergency Department because they need a diagnostic test or want to get in sooner to see a specialist?

A: We realize that many patient families do not wish to wait for their appointment with a specialist or want to complete a diagnostic test after hours. These nonemergent visits to the Emergency Department affect our efforts to provide care and efficient service. We are working to centralize referrals and reduce Children's Physician Group wait times. We are growing our offerings in many key specialty areas and are providing single points of contact for patients and physicians to improve patient access. We continue to rely on your support to help patient families appropriately utilize the Emergency Department.

Visit choa.org/guidelines for clinical guidelines and resources.

Guidelines for referrals

Below is a list of guidelines to follow when referring a patient for a consultation to Children's Healthcare of Atlanta Endocrinology. These are meant to be general recommendations. If you have specific questions, call **404-785-DOCS (3627)** and ask to speak with the on-call endocrinologist.

Common conditions treated

- Adrenal disorders (e.g., adrenal insufficiency)
- Bone disorders
- Calcium disorders, including hypercalcemia and hypocalcemia
- Cholesterol disorders
- Congenital adrenal hyperplasia
- Cushing syndrome
- Delayed, absent or early puberty
- Diabetes insipidus
- Disorders of the anterior pituitary gland
- Disorders of sex development
- Growth disorders
- Gynecomastia in males
- Hirsutism in females
- Hypoglycemia
- Prader-Willi syndrome
- Prolactin disorders
- Rickets
- Short stature
- Syndrome of inappropriate antidiuretic hormone (SIADH)
- Thyroid nodules
- Thyroid disorders, including hyperthyroidism and hypothyroidism
- Turner syndrome
- Type 1 diabetes mellitus
- Type 2 diabetes mellitus

Urgent referrals

If you feel your patient needs to be seen as soon as possible, note "urgent" on your referral. All referrals marked "urgent" are triaged to help make sure patients are seen in a timely fashion. If you wish to speak to the on-call endocrinologist, call 404-785-DOCS (3627). Generally, conditions that may warrant an urgent initial outpatient visit include, but are not limited to:

- New Type 1 or 2 diabetes.
- Congenital hypothyroidism (neonate).
- Goiter or palpable nodule, if clinical findings include asymmetric gland, increasing size or discomfort, abnormal thyroid biopsy.
- Abnormal height velocity or crossing percentiles **and** associated with severe headaches and/or blurry vision.
- Hypoglycemia and failure to thrive.

Routine referrals

There are several conditions we see that may not warrant an urgent evaluation given the available resources. These may include, but are not limited to, the following:

- Short stature (current height less than 3rd percentile for age or crossing percentiles on repeated growth measurements).
- Precocious puberty >7 years of age.
- Delayed puberty.
- Non-palpable nodule on thyroid (seen on ultrasound).
- Possible hypothyroidism with TSH <20 uIU/ml
- Congenital hypothyroidism (already on treatment).

Referral checklist and guidelines for common diagnoses

When referring a patient for any reason, you must include office notes and growth curves. Otherwise, we will not be able to schedule your patient. In the table below, we have listed the labs and/or documents we require for the most common referrals. If the suspected diagnosis is not listed below, you only need to include office notes, labs that have already been ordered and visual growth curves with plotted points (multiple points are preferred, if applicable).

Suspected diagnosis	Labs/documents required before scheduling	Criteria for referral	Steps to take if criteria are not met, but concern for condition still exists
Abnormal thyroid function	<input type="checkbox"/> Office notes <input type="checkbox"/> Growth curves <input type="checkbox"/> Thyroid function tests	<ul style="list-style-type: none"> Goiter present TSH > 9 uIU/mL Free T₄ < 0.8 ng/dL and/or total T₄ < 5 mcg/dL 	<p>If initial (TSH) is elevated, but < 8.9 uIU/mL, repeat labs in one month with TSH, free T₄, thyroid peroxidase autoantibody (TPO) and antithyroglobulin autoantibodies (ATG). Document thyroid exam.</p> <p>If there is no goiter and BMI > 85%, TSH remains minimally elevated and autoantibodies are negative, TSH should return to normal after weight loss is achieved. No further testing required</p> <p>Guidelines for positive autoantibodies and normal thyroid function:</p> <ul style="list-style-type: none"> Assess thyroid function every 6 – 12 months. Refer your patient if results: <ul style="list-style-type: none"> TSH between 4-8.9 mIU/L and Free T₄ < 0.8 ng/dL or total T₄ < 5 mcg/dL Abnormal thyroid exam
Diabetes, obesity, metabolic syndrome	<input type="checkbox"/> Office notes <input type="checkbox"/> Growth curves <input type="checkbox"/> A1c <i>If a patient has an established diabetes diagnosis, send all available records with focus on initial lab eval.</i>	Due to the large volume of referrals of this nature, we redirect patients with an A1c < 6.5% to Strong4Life, regardless of acanthosis or hyperinsulinemia	<p>For possible Type 2 Diabetes, two abnormal values are required to diagnose diabetes in the absence of symptoms. Values include:</p> <input type="checkbox"/> Fasting glucose > 126 mg/dl or <input type="checkbox"/> 2-hr post-prandial glucose > 200 mg/dl or <input type="checkbox"/> A1c > 6.5%
Hypoglycemia/syncope	<input type="checkbox"/> Office notes <input type="checkbox"/> Growth curves <input type="checkbox"/> Glucose	<ul style="list-style-type: none"> Documented serum glucose < 60 mg/dl 	Consider another specialty referral based on symptoms
Hyperlipidemia	<input type="checkbox"/> Office notes <input type="checkbox"/> Growth curves <input type="checkbox"/> Fasting lipid panel	<ul style="list-style-type: none"> LDL ≥ 190 mg/dL HDL < 20 mg/dl Triglycerides > 300 mg/dl Moderate LDL elevation (130-189 mg/dL), no response to lifestyle management after 6 months and known risk factors 	<p>For moderate LDL elevation (130-189 mg/dL), lifestyle management is recommended for 6 months before referring to endocrinology.</p> <p>Abnormal triglyceride levels that are < 300 mg/dL may respond to lifestyle management plus-or-minus fish oil.</p>
Short stature and poor weight gain	<input type="checkbox"/> Office notes <input type="checkbox"/> Growth curves	<ul style="list-style-type: none"> Poor weight gain and Abnormal growth velocity 	If growth velocity is well maintained but weight gain appears to be lacking growth hormone deficiency is unlikely. We recommend a referral to GI.

Suspected diagnosis	Labs/documents required before scheduling	Criteria for referral	Steps to take if criteria are not met, but concern for condition still exists
Short stature in adolescents	<input type="checkbox"/> Office notes <input type="checkbox"/> Growth curves <input type="checkbox"/> Bone age	<ul style="list-style-type: none"> • Bone age for female read < 15 years of age • Bone age for male read at < 16 years of age • < 2 years post menarche 	<p>99% of final adult height achieved when bone age is > 15 years in females and > 16 years in males. No intervention available to enhance final adult height.</p> <p>Two years post menarche, final adult height is achieved.</p>
Vitamin D deficiency	<input type="checkbox"/> Office notes <input type="checkbox"/> Growth curves <input type="checkbox"/> 25 OH Vitamin D	<ul style="list-style-type: none"> • Physical exam consistent with nutritional rickets • Radiographic evidence of rickets • Alkaline phosphatase above age normal limits 	Begin Vitamin D supplementation based on American Academy of Pediatrics guidelines

Growth curves

We require growth curves for all referred patients prior to scheduling. Note, it is very important to provide a **visual line graph**, ideally for both height and weight, although both are not required. Multiple points are preferred, *if available*. If you have only seen the patient once, we will accept graphs with single points.

Office notes

Office notes are crucial in helping us determine the intricacies of your patient's case. Note, we require office notes *beyond* just the reason for referral. Whether you refer to them as Clinical Notes, History of Present Illness (HPI), Interval History or Notes, what we need are notes that the provider took during the last visit that explain the child's case and chief concern. A short "reason for referral" is **not** sufficient. See examples below.

Insufficient

Referral

Date requested: 08/16/2021

Requested by: FirstName LastName, NP

Referral to: pediatric endocrinology

Summary of care provided:

Reason for referral/notes: breast buds and pubic hair

ICD code: Precocious puberty (ICD-10: E30.1)

Sufficient

Diagnosis	<ul style="list-style-type: none">• Congenital hypothyroidism ICD-10: E03.1: Congenital hypothyroidism without goiter
Order Name	Orders included: 1 Congenital hypothyroidism ICD-10: E03.1: Congenital hypothyroidism without goiter <ul style="list-style-type: none">• PEDIATRIC ENDOCRINOLOGIST REFERRAL Schedule within provider's discretion
Notes	6 mo. male, former 30-week premature delivery – with congenital hypothyroidism, h/o elevated TSH x3 on newborn screenings. Presented for primary visit on [date], repeat TSH elevated to 5.4, normal free T4. Telephone consult with Dr. LastName. Advised to refer to pediatric endo at 6 mo. of age. Please evaluate and assist.

Pediatric endocrinology and obesity

Children'sSM
Healthcare of Atlanta

A physician's quick guide to helping children with obesity

At Children's Physician Group–Endocrinology and Strong4Life, our goals are to diagnose pathological causes of obesity and manage endocrine complications of obesity. This document provides a synopsis of endocrine problems that commonly arise in general pediatric management of obesity.

Etiology of obesity

Short stature or slow growth velocity in a growing obese child is a red flag for a pathological cause. Obesity onset before age 5 is typical in children with a monogenic cause of obesity. However, only 5% of children with early onset obesity have a known genetic case.

Common conditions

Cushing syndrome

This can be difficult to diagnose. Look for features beyond obesity and striae, including short stature, hypertension, proximal limb muscle wasting or weakness, and diabetes. The overnight dexamethasone suppression test is used to evaluate the risk of Cushing syndrome.

- One dose of 15 mcg/kg (max 1 mg) dex po at 11 p.m., and check cortisol the following morning between 7 a.m. and 9 a.m.
- Cortisol should be <2.0 mcg/dL.

Diabetes

- Screen for diabetes every three years in asymptomatic, obese children ages 10 to 19 years old with a family history of Type 2 diabetes, high-risk race or signs of insulin resistance. There is no agreed upon best test (fasting glucose, random glucose, HbA1c).
- Insulin levels do not effectively predict future Type 2 diabetes.
- Apart from lifestyle management, there is no approved therapy for children with prediabetes. Patients with prediabetes that persists after a serious effort to manage lifestyle for greater than six months may benefit from metformin treatment or an endocrine consult.

- A diabetes education consultation or a referral to Strong4Life can be arranged through Children's Healthcare of Atlanta for children with prediabetes.

High LDL cholesterol

- Ensure a fasting sample was obtained.
- Take an average of two samples drawn two to 12 weeks apart when patient is not acutely ill.
- Check for primary disease-causing high LDL cholesterol (i.e., fasting CMP, TSH and urinalysis).
- For moderate elevation (130-189 mg/dL), lifestyle management is recommended for all patients. If no response within six months, evaluate for the following risk factors:
 - Hypertension
 - Smoking
 - Diabetes
 - Nephrotic syndrome
 - Renal failure
 - Renal transplant
 - History of Kawasaki disease
 - HIV
 - Chronic inflammation
 - Cancer survivor
 - Family history of premature cardiovascular disease
- If a high-risk factor is present, the child may benefit from lipid clinic consult.
- If LDL \geq 190 mg/dL, a referral to the lipid clinic is recommended irrespective of risk factors present.

High fasting triglycerides

High triglycerides with low HDL cholesterol is common in these children. Children with severely low HDL (<20 mg/dL) may benefit from a lipid clinic consult.

Ensure fasting sample was obtained.

Take an average of two samples drawn two to 12 weeks apart when patient is not acutely ill.

Check for primary disease-causing high triglyceride (i.e., fasting CMP, TSH and urinalysis).

Abnormal levels that are <300 mg/dL may respond to lifestyle management plus or minus fish oil.

Levels >300 mg/dL may benefit from a lipid clinic consult.

Polycystic ovarian syndrome (PCOS)

Normal variations in adolescents can make a PCOS diagnosis difficult using standard criteria. Minimum requirements for diagnosis include:

Irregular or absent ovulation

Clinical signs of high androgens (e.g., hirsute and severe acne)

Differential diagnosis of adrenal disease or an ovarian tumor can be evaluated with minimal investigation.

17-hydroxyprogesterone

Free testosterone

DHEA-S

TSH

Fasting complete metabolic profile

Fasting lipid profile

hCG (urine or serum)

± 25 (OH) vitamin D

combined oral contraceptive pill (OCP) is the first line of therapy. Use OCP with low androgen activity. Consider the risk of thrombosis before starting oral contraceptive. Metformin is used by some, but it is not a Food and Drug Administration (FDA)-approved indication.

Evaluating complications of obesity

Thyroid function testing

- If initial thyroid-stimulating hormone (TSH) is high but <9 uIU/mL, palpate thyroid gland and repeat TSH and Free T4. Get thyroid peroxidase autoantibody (TPO) and antithyroglobulin autoantibodies.
- If there is no goiter, TSH remains minimally elevated and autoantibodies are both negative, TSH should return to normal after weight loss is achieved.
- If there is a goiter present, TSH rises above 9 uIU/mL or either autoantibody is positive, a referral to endocrinology is indicated.

Contact us

Call **404-785-DOCS (5437)** to make a referral or for a physician-to-physician consult.

Visit **choa.org/md** for more information and to access our online referral form.

Children's Physician Group– Gynecology

Children'sSM
Healthcare of Atlanta

Guidelines for referrals

Below is a list of guidelines to follow when referring a patient for a consultation to Children's Physician Group–Gynecology. These are meant to be general recommendations. If you have specific questions, call **404-785-DOCS (3627)** and ask to speak with the on-call gynecologist.

Common conditions treated

- Abnormal uterine bleeding
- Adnexal masses (ovarian/paraovarian cysts)
- Amenorrhea
- Complex contraception (pregnancy prevention in medically complex patients)
- Congenital adrenal hyperplasia
- Delayed puberty
- Disorders of sex development
- Dysmenorrhea
- Endometriosis
- Hormone replacement therapy
- Menstrual suppression for special needs
- Mullerian (uterine) anomalies
- Pelvic inflammatory disease
- Precocious puberty
- Premature ovarian insufficiency
- Polycystic ovarian syndrome
- Urethral prolapse
- Vaginal anomalies
- Vulvar vaginal issues
 - Vaginal discharge
 - Prepubertal vulvovaginitis
 - Labial/vulvar masses and ulcers
 - Lichen sclerosus
 - Labial adhesions
 - Labial hypertrophy
 - Genital tract trauma

For patients with the conditions listed below, we recommend a referral to our Adolescent Medicine Clinic, located at Hughes Spalding Hospital (phone: 404-785-9850), or an external gynecology provider.

- **New patients >16 years:** irregular periods, vulvovaginitis, contraceptive counseling, dysmenorrhea
- **Return patients >16 years:** controlled symptoms and no complex medical issues

Urgent referrals

Most issues we see do not warrant an urgent referral. However, if you feel your patient needs to be seen as soon as possible, note “urgent” on your referral. All referrals marked “urgent” are triaged to help make sure patients are seen in a timely fashion. If you wish to speak to the on-call pediatric gynecologist, call 404-785-9635. Generally, conditions that may warrant an urgent initial outpatient visit include, but are not limited to:

- Ovarian, pelvic, adnexal masses
- Acute genital tract trauma
- Differences of sexual development
- Vaginal/menstrual outflow tract obstruction

Routine referrals

The majority of conditions we see may not warrant an urgent evaluation given the available resources. These may include, but are not limited to, the following:

- Heavy menses
- Irregular or abnormal menstrual bleeding
- Painful menses (dysmenorrhea, endometriosis, pelvic pain NOS)
- Vaginal discharge or pain
- Precocious puberty
- Delayed puberty
- PCOS

Referral checklist and guidelines for common diagnoses

When referring a patient, you must include office notes. Otherwise, we will not be able to schedule your patient. In the table below, we have listed the labs and/or documents we require for the most common referrals. If the suspected diagnosis is not listed below, you only need to include office notes and labs that have already been ordered.

Suspected diagnosis	Labs/documents required before scheduling	Criteria for referral	Suggested work-up	Possible initial management
Heavy menses	<input type="checkbox"/> Office notes <input type="checkbox"/> Lab results if ordered	Bleeding >7days, >7 pads per day, menses resulting in anemia	<ul style="list-style-type: none"> • CBC • Von Willebrand panel • Fibrinogen • TSH • Iron studies 	***Aygestin; combined oral contraceptive pill (OCP); consider the risk for thrombosis before starting OCP*
Precocious puberty	<input type="checkbox"/> Office notes <input type="checkbox"/> Growth curve <input type="checkbox"/> Lab results if ordered	Breast, genital hair, vaginal bleeding prior to age 8	<ul style="list-style-type: none"> • LH • FSH • Estradiol • TSH • Prolactin 	
Delayed puberty	<input type="checkbox"/> Office notes <input type="checkbox"/> Growth curve <input type="checkbox"/> Lab results if ordered	No pubertal development by age 13	<ul style="list-style-type: none"> • LH • FSH • Estradiol • TSH • Prolactin 	
Primary amenorrhea	<input type="checkbox"/> Office notes <input type="checkbox"/> Growth curve <input type="checkbox"/> Lab results if ordered	No menses by age 15 or 3 years after menarche	See irregular menses workup	
Irregular menses, oligomenorrhea, Polycystic Ovarian Syndrome (PCOS)	<input type="checkbox"/> Office notes <input type="checkbox"/> Growth curve <input type="checkbox"/> Lab results if ordered	Irregular or absent bleeding Do labs if any androgenizing symptoms (acne, hirsutism)	<ul style="list-style-type: none"> • LH • FSH • Estradiol • 17-hydroxy-progesterone • Free testosterone • DHEA-S • TSH • Fasting complete metabolic profile • Fasting lipid profile • hCG (urine or serum) • Prolactin 	OCP is the first line of therapy; consider the risk for thrombosis before starting OCP* Metformin is used by some, but it is not an FDA-approved indication
Pelvic mass	<input type="checkbox"/> Office notes <input type="checkbox"/> Imaging report*	We must have imaging report prior to scheduling appointment	<ul style="list-style-type: none"> • Patient to bring disc with images 	
Dysmenorrhea	<input type="checkbox"/> Office notes <input type="checkbox"/> Imaging if done			Ibuprofen 600mg TID; heating pads, warm bath, physical activity
Complex contraception	<input type="checkbox"/> Office notes <input type="checkbox"/> Lab results if ordered	Patient has underlying medical problem that would prohibit adolescent medicine or general GYN from providing care	<ul style="list-style-type: none"> • Gonorrhea • Chlamydia • Trichomonas • +/-RPR and HIV 	

*AUB labs should be drawn **before** starting hormone therapy, if indicated.

***Initial therapy in patient with heavy menstrual bleeding that is actively bleeding

- Taper if hgb 8-11.9 and actively bleeding:
 - Aygestin 10mg BID x3 days until 3 days after bleeding stops then continue 10mg daily OR
 - Orthocyclen 1 tab q8 hours x3 days, then BID x2 days, then daily
- Maintenance if hgb >11.9 or not actively bleeding:
 - Aygestin 10mg daily OR
 - Orthocyclen 1 tab daily (may skip placebo week)
- Send to Emergency Department for active bleeding (not spotting) and hgb <8

Growth curves

We require growth curves for all referred patients prior to scheduling. Note, it is very important to provide a **visual line graph**, ideally for both height and weight, although both are not required. Multiple points are preferred, *if available*. If you have only seen the patient once, we will accept graphs with single points.

Insufficient

Referral

Date Requested: 08/16/2021

Requested by: anastasiya drogoul, NP

Referral To: Pediatric Endocrinology

Summary of Care Provided

Reason for Referral/Notes: breast buds and pubic hair

ICD Code: Precocious puberty (ICD-10: E30.1)

Sufficient

Menarche 11/20. Cycles have been very heavy with clots, uses 5-6 pads/day. Cycles last 2-4 weeks
Asthma -mild persistent. On Ventolin HFA prn and Flovent daily. Needs refills

Aflac Cancer and Blood Disorders Center

Children's
Healthcare of Atlanta

Referral Guidelines

Below is a list of guidelines to follow when referring a patient for a consultation with the hematology/oncology practice at the Aflac Cancer and Blood Disorders Center. These are meant to be general recommendations. If you have specific questions, call **404-785-DOCS (3627)** and ask to speak with the on-call hematologist or oncologist. If you have a question regarding a patient needing urgent care, call **404-785-7778** to connect directly with the Children's Transfer Center.

Common conditions treated

- Abnormal bleeding
- Thrombosis (excessive clotting)
- White blood cell problems (neutropenia, leukocytosis)
- Anemia
- Erythrocytosis
- Thrombocytosis (platelet counts >500,000)
- Thalassemia major/Hb H disease
- ITP/low platelets
- Sickle cell disease
- Immunohematology
- Lymphadenopathy
- Leukemia/lymphoma
- Solid tumor
- Brain tumor
- Histiocytosis
- Cancer predisposition (genetics/genetic counseling)
- Survivorship (>2 years off therapy)
- Bone marrow transplant

Urgent referrals

If you feel your patient needs to be seen as soon as possible, note "urgent" on your referral. All referrals marked "urgent" are triaged to help make sure patients are seen in a timely fashion. If you wish to speak to the on-call hematologist/oncologist, call **404-785-DOCS (3627)**. If you have an urgent referral for one of the below concerns, please call **404-785-7778** to connect with the Children's Transfer Center directly.

- Significant concern for new oncologic diagnosis
- Severe anemia (hemoglobin <6)
- ITP with platelet counts <20K
- Concern for new blood clot
- Severe neutropenia with fever (ANC <200)

Routine referrals

All referrals are reviewed by our physicians for clinical appropriateness and may be deemed routine given the available resources. There are some conditions that do not need a referral to hematology/oncology at Children's. These may include, but are not limited to, the following:

- Elevated lead levels (see current CDC guidelines)
- Henoch-Schonlein Purpura (HSP), a non-hematologic disorder
- Mild or moderate iron deficiency anemia without a trial of iron (Hgb >8, iron trial x1 month)
- Thrombocytosis with platelet counts <500,000
- Any patient currently pregnant
- Any patient 18 and older with a new hematologic diagnosis with no existing relationship with the Aflac Cancer and Blood Disorders Center
- Any patient 21 and older with a new cancer diagnosis with no existing relationship with the Aflac Cancer and Blood Disorders Center (exceptions made for available clinical trials)

Note: All referrals to the Vascular Anomalies Clinic should be directed to vac@choa.org.

Referral checklist

All referrals are reviewed by a physician for clinical appropriateness. If appropriate, they are assigned to a team and scheduled based on the information provided. **When referring a patient for any reason, you must include all patient demographics, clinical notes, as well as labs and/or scans that may have been completed. Otherwise, we will not be able to schedule your patient.**

Other recommendations to help ensure your referral can be addressed in a timely manner:

- Be specific about what the referral is for and include a possible diagnosis (i.e., anemia, low WBC count).
- If you are referring for an abnormal newborn screen, include a copy of the newborn screen and any other associated workup or treatment notes.
- Provide a phone number and direct extension (if applicable) for the referring provider or someone within the practice who can answer questions about the referral.

Children's Physician Group– Nephrology

Guidelines for referrals

Below is a list of guidance to follow when referring a patient for a consultation to Children's Physician Group–Nephrology, including our Hypertension Clinic. These are meant to be general recommendations. If you have specific questions, call **404-785-DOCS (3627)** and ask to speak with the on-call nephrologist. You will almost always be speaking directly with an attending nephrologist.

Conditions treated

- Congenital kidney problems
- Kidney failure
- Kidney stones
- Nephrotic syndrome
- Proteinuria
- Cystic kidney disease
- Glomerulonephritis
- Hematuria
- Hemolytic uremic syndrome
- Hypertension
- Enuresis
- Electrolyte abnormalities
- Urinary tract infections

Urgent referrals

If you feel your patient needs to be seen immediately, call **404-785-DOCS (3627)**. Some of these patients may warrant an Emergency Department evaluation or hospitalization. Generally, conditions that may warrant an Emergency Department evaluation, hospitalization or an urgent initial outpatient visit include, but are not limited to:

- **Nephrotic syndrome:** Urgent clinic if normal renal function and absence of severe edema; else, Emergency Department
- **Severe hypertension**
 - Stage 2 hypertension: Urgent clinic
 - Symptomatic hypertension or BP > 30 mm Hg above the 95% (>160/100 in adolescent): Discuss with nephrologist
- **Acute kidney injury:** Emergency Department
- **Acute glomerulonephritis:** Discuss with nephrologist
- **HSP with significant proteinuria:** Urgent clinic visit if renal function is normal; else, discuss with nephrologist; obtain random or first AM (preferred) urine protein/creatinine ratio, renal function panel* and microscopic urinalysis
- **Proteinuria with decreased kidney function:** Discuss with nephrologist
- **Gross hematuria:** Discuss with nephrologist if findings of glomerulonephritis (elevated BP, elevated creatinine or hypoalbuminemia); consider these labs if suspect glomerulonephritis: renal function panel*, urine protein/creatinine ratio C3, C4 and ANA; consider urine culture if fever, dysuria, frequency; consider ultrasound if significant pain, may need urgent evaluation (urology or Emergency Department)

Lab tests and ultrasound results that do not need a referral

- Elevated BUN/creatinine ratio: Normally elevated in young children due to low creatinine levels
- Elevated BUN and normal creatinine: Mildly elevated BUN is rarely concerning if the creatinine is normal

- Elevated urine protein if urine protein/creatinine ratio is normal (< 0.2 mg/mg or <200 mg/g)
- Isolated urine crystals, unless cystine or 2,8-dihydroxyadenine crystals
- Kidney length asymmetry if both kidneys are normal in length
- Duplicated collecting system is a normal variant unless associated with hydronephrosis, urine leaking due to ectopic ureter or dysplasia

Conditions that should be referred to other specialists

- Hydronephrosis → urology
- Symptomatic kidney stone that requires acute management
- Terminal (end-of-stream) visible hematuria → urology

Conditions where most referrals can be avoided with basic testing in your office

- **Microscopic hematuria:** Only refer if red blood cells are confirmed by microscopy on at least 2 to 3 occasions; consider kidney ultrasound prior to referral if hematuria is persistent.
- **Proteinuria:** Only refer after screening for benign orthostatic proteinuria by performing a first AM urine protein/creatinine ratio and demonstrating an elevated value (> 0.2 mg/mg or >200 mg/g). If non-orthostatic proteinuria, consider renal function panel*, cholesterol, C3, C4 and ANA prior to referral.
- **Hypertension:** Confirm by obtaining auscultatory values using an appropriately sized cuff. Many overweight or muscular teenagers need a large adult cuff. For stage 1 hypertension, confirm 1 to 2 weeks before referring. Please refer patients with hypertension without associated significant kidney disease to our Nephrology Hypertension Clinic that has ambulatory blood pressure monitoring (ABPM) and nutritional support for patients.

Locations

Our main clinic is at the Center for Advanced Pediatrics with additional outreach clinics throughout metro Atlanta.

- **Center for Advanced Pediatrics:** 2174 North Druid Hills Road NE, Atlanta, GA 30329
- **Children's at Northpoint:** 3795 Mansell Road, Alpharetta, GA 30022
- **Children's at Satellite Boulevard:** 2660 Satellite Boulevard, Duluth, GA 30096
- **Children's at Town Center Outpatient Care Center:** 605 Big Shanty Road, Kennesaw, GA 30144

Tell your patient families to ask to be seen in the clinic that is most convenient for them. Note: Outreach clinics may not be able to accommodate urgent appointments since some are only held monthly or bi-monthly.

Referrals and medical records

- **Fax:** Fax referral requests to 404-785-9111.
- **Online:** Complete our online referral form at choa.org/referral.
- **accessCHOA:** Send referrals through accessCHOA.

Make sure all appropriate records are faxed to our office prior to the patient's visit. This includes the office visit notes, imaging studies (i.e. kidney ultrasound) and lab results. If lab results are pending at the time the records are faxed, send the complete results when available.

Note: In case of an urgent concern or emergency, call 911 or advise the family to go the nearest emergency department right away.

**Renal function panel includes electrolytes, BUN, creatinine, albumin and phosphorus. CMP is an alternative, but it does not include phosphorus.*

Guidelines for Referrals

Below is a list of guidelines to follow when referring a patient for a consultation to Children's Healthcare of Atlanta Neurology. These are meant to be general recommendations. If you have specific questions, call **404-785-DOCS (3627)**, and ask to speak with the on-call neurologist.

Office Notes

We require office notes beyond just the reason for referral. Office notes are crucial in helping us determine the intricacies of your patient's case. Whether you refer to them as Clinical Notes, History of Present Illness (HPI), Interval History or Notes, what we need are notes that the provider took during the **last visit that explain the child's case and chief concern for referral**. A short "reason for referral" is **not** sufficient. See examples below.

Insufficient

Referral

Date requested: 08/16/2021

Requested by: First Name Last Name, NP

Referral to: Pediatric Neurology

Summary of care provided by:

Reason for referral/notes: Seizure Disorder

ICD Code: Seizure Disorder, Epilepsy, unspecified, not intractable, without status epilepticus (ICD-10: G40.909)

Sufficient

***ALL REFERRALS MUST INCLUDE COMPLETE OFFICE NOTES**

Patient Name is a XX-year-old female presents with mom c/o having a seizure at school that lasted for two minutes. She states she was unconscious for 20 minutes. Per mom this is her second time having seizures. She was not sick or having any fever. Mom was concerned of patient not eating well.

Neurological Symptoms: Seizures

Diagnosis:

Seizure Disorder, Epilepsy, unspecified, not intractable, without status epilepticus ICD-10: G40.909

Order Name:

Orders included: 1
Seizure Disorder

ICD-10: G40.909. Seizure Disorder, Epilepsy, unspecified, not intractable, without status epilepticus

- PEDIATRIC NEUROLOGIST REFERRAL

Schedule within: provider's discretion

Excluded Services

Patients that meet the criteria below will be referred back to their primary care physician for management. Additional criteria must be met before patients will be seen by Children’s Healthcare of Atlanta Neurology.

Suspected Diagnosis	Criteria
Simple febrile seizures	<ul style="list-style-type: none"> Between 6 months and 5 years old Fever No focal features Less than 15 minutes 1 in 24 hour period <p>*Note: Age of first simple febrile seizure does change criteria</p>
Simple headaches	<ul style="list-style-type: none"> Infrequent primary headache disorder (ex: migraine with or without aura or tension type) that responds to an abortive (OTC or triptan) and/or a first line preventative and lifestyle changes Recurrent headaches for less than 6 months without red flags unless meets criteria for chronic headache (15 days or more for over 3 months) Referrals from the ED (can make exceptions for documented chronicity) Suggestion: return to PCP for care and to determine if Neurology referral is needed Acute onset headache (ex: associated with acute viral illness)
Syncope	<ul style="list-style-type: none"> Fainting in a standing position, than when sitting or lying Turning pale Vision went dark Low blood pressure Dizziness, lightheadedness, palpitations, fainting up on standing or moving to an upright position If applicable, rule out syncope vs seizure with referral to cardiology first <p>*If possible, obtain vitals when symptomatic (heart rate, blood pressure, etc.)</p>
Tics (less than 6 months)	<ul style="list-style-type: none"> Simple motor (i.e. blinking) and/or vocal tics (i.e. throat clearing, sniffing) <ul style="list-style-type: none"> Onset of tics between ages 4-11* Not causing pain or interfering with activities OR have not tried one first-line tic medication (i.e. guanfacine or clonidine) Normal neurological exam No neurologic comorbidities

Conditions Treated

- | | | |
|--|--|--|
| <ul style="list-style-type: none"> Acute disseminated encephalomyelitis Anti-NMDA receptor encephalitis Cerebral palsy Complex autism spectrum disorder with a neurological component Concussion Epilepsy and seizure disorders Headaches and migraines | <ul style="list-style-type: none"> Infantile spasms Leukodystrophy Movement disorders Multiple sclerosis Myasthenia gravis Myopathies Neurodevelopmental Disorders Neurometabolic and neurogenetic disorders Neuromyelitis optica | <ul style="list-style-type: none"> Neuropathy Psychogenic non epileptic events (PNEE) Rett syndrome Spasticity Spells Spinal Muscular Atrophy Stroke Transverse myelitis Traumatic brain injury |
|--|--|--|

Referral Checklist and Guidelines

In the table below, we have listed the labs and/or documents we require, and the criteria needed for the most common referrals. If these guidelines are not met, we have outlined steps to take if the condition still exists. If the suspected diagnosis is not listed below, you only need to include office notes.

Suspected Diagnosis	Lab documents to send as part of referral	Criteria for referral
Cerebral palsy	<ul style="list-style-type: none"> Office notes, documentation of birth history and previous neuroimaging, preferred 	<ul style="list-style-type: none"> Known CP with co-morbid neurological disorders (e.g. epilepsy) Known CP without a current CP provider (not already seeing Physiatry) Suspected CP: <ul style="list-style-type: none"> Prematurity AND motor delay or problems with posture or muscle tone (hypertonia or hypotonia) History of brain injury or abnormal brain development AND motor delay or problems with posture or muscle tone (hypertonia or hypotonia) Motor delay AND exaggerated reflexes Motor delay AND hypertonia (stiffness, spasticity) Spasticity: <ul style="list-style-type: none"> Increased muscle tone Involuntary movements which may cause spasms and contractures Exaggerated reflexes Contractures Altered posture
Complex autism spectrum disorder with a neurological component	<ul style="list-style-type: none"> Developmental assessments Other referrals MRI Genetics EEG results Description of medical or neurological complexity Current disabilities 	<ul style="list-style-type: none"> Known primary neurologic or genetic disorder with documented evidence Description of reason that psychological evaluation at Marcus would not be sufficient (do not include wait list issues) Documented visit with general or specialty neurology appointment with findings substantiating complexity
Concussion	<ul style="list-style-type: none"> Documented when injury occurred Ongoing past concussion symptoms 	<ul style="list-style-type: none"> History of post-traumatic seizures Headache > 4wks Injury < 6 months ago Persistent cognitive or neurological symptoms
Epilepsy and seizure disorders	<ul style="list-style-type: none"> Office notes EEG Imaging results 	<ul style="list-style-type: none"> Two or more unprovoked seizures with or without abnormal EEG <p style="text-align: center;">OR</p> <ul style="list-style-type: none"> Known diagnosis of epilepsy/second opinion

Headaches and migraines	<ul style="list-style-type: none"> • Office notes (including documentation that patient meets criteria) • Imaging results 	<ul style="list-style-type: none"> • Recurrent headache for >6 months, not responding to abortive treatment and lifestyle modifications • Headaches with other associated red flags or focal neurological deficits • Headache that is resulting in missed school days or worsening school performance (including declining grades or decreased participation in extracurricular activities) • Chronic headache criteria: Headache greater than 15 days in a month for over 3 months
Low muscle tone / hypotonia	<ul style="list-style-type: none"> • Office notes 	<ul style="list-style-type: none"> • Low muscle tone affecting development
Movement disorders	<ul style="list-style-type: none"> • Office notes • Lab results • MRI results 	<ul style="list-style-type: none"> • Abnormal involuntary movements with retained awareness (i.e. chorea, ataxia, dystonia)
Neurodevelopmental Disorders	<ul style="list-style-type: none"> • OT, SLP or PT notes • Labs results • Imaging results 	<ul style="list-style-type: none"> • Office notes pertaining to the developmental delay in question • Developmental screening results from within the last 3 months • Concern for not meeting developmental milestones • Evidence that idiopathic autism spectrum disorder is not and should not be the primary concern
Neuropathy	<ul style="list-style-type: none"> • Office notes 	<ul style="list-style-type: none"> • Numbness, tingling, burning sensation • Increased sensation to touch • Muscle weakness • Pain • Family history or inherited neuropathies
Rett syndrome	<ul style="list-style-type: none"> • Office notes • Lab results • Genetic testing (if already preformed) • Any imaging (MRI, EEG, CT) • Release of information from previous/current facilities 	<ul style="list-style-type: none"> • Slowed growth • Developmental delays (loss of coordination and movement) • Unusual hand movements • Seizures • Sleep disturbances and irritability • Genetic testing • CT/MRI/EEG

Spells and Seizure-like Activity	<ul style="list-style-type: none"> • Office notes • EEG results • ED notes if applicable • Screening measures if applicable • Family recorded video of event(s) if applicable 	<ul style="list-style-type: none"> • If applicable, rule out syncope vs seizure with referral to cardiology first • Screening for depression, anxiety, suicidal or homicidal ideation • Episodes of full body convulsions, staring spells, or jerking on one side of the body • Counsel family to record video for events to have available for appointment
Tics (>6 months)	<ul style="list-style-type: none"> • Office notes • Lab results 	<ul style="list-style-type: none"> • Complex motor (jumping, hitting, copropraxia) +/- complex vocal tics (coprolalia, words/phrases) • Onset of tics after age 11, or under age 4* • Simple tics which have failed one first-line medication • Abnormal neurological exam or neurologic comorbidities (i.e. autism, cerebral palsy) • Eye fluttering • Concern for seizures • Routine/first available appointment: <ul style="list-style-type: none"> ○ Brief episodes ○ No altered mental status • Previously sought ED care for tics

Urgent referrals

If you feel your patient needs to be seen as soon as possible, note “urgent” on your referral. All referrals marked “urgent” are triaged to help make sure patients are seen in a timely fashion. If you wish to speak to the on-call neurologist, call 404-785-DOCS (3627).

Referrals for Judson L. Hawk Jr., M.D., Clinic for Children

The Judson Hawk center consists of a multidisciplinary team of doctors who see patients with a wide range of medical conditions. **This center is different than the Children’s Healthcare of Atlanta Outpatient Neurology department and therefore has a different referral review process.** If your child requires treatment for one of the following conditions listed below, please have your referring provider send to (404) 785-9111.

- Charcot-Marie-Tooth
- Facioscapulohumeral muscular dystrophy
- Muscular dystrophy
- Neurocutaneous syndrome
- Neurofibromatosis
- Tuberous sclerosis complex

Guidelines for referrals

Below is a list of guidelines to follow when referring a patient to Children's Healthcare of Atlanta Neuropsychology for a consultation or testing. These are meant to be general guidelines. If you have specific questions, call the Neuropsychology provider line at **404-785-2849, option 4**.

Which patients should you refer?

Due to the specialized nature of our practice, we only see patients with a primary neurological diagnosis. While some of these patients might have secondary psychiatric or behavioral diagnoses*, we can only see them if they have a primary neurological diagnosis from a medical doctor.

Common conditions treated

- Abnormal electroencephalogram (EEG)
- Abnormal MRI of brain
- Anoxic or hypoxic brain injury/encephalopathy
- Arteriovenous malformations
- Brain or neurological injury (not listed elsewhere)
- Brain tumor
- Cardiac condition (congenital heart disease, heart failure, heart transplant)
- Cerebral palsy
- Chiari malformation
- Concussion
- Congenital brain abnormality (not listed elsewhere)
- Di George's Syndrome (22q11.2 Deletion Syndrome)
- Duchenne muscular dystrophy
- Encephalitis
- Epilepsy and seizure disorder
- Genetic and metabolic disorders
- Hydrocephalus
- Meningitis
- Neurofibromatosis
- Neuroimmunological disorders (e.g., Anti-NMDA receptor encephalitis, multiple sclerosis, autoimmune encephalitis)
- Spina bifida
- Stroke, brain hemorrhage, cerebral ischemia
- Traumatic brain injury
- Tuberous sclerosis

**We do not see patients with a primary diagnosis or presence of severe psychiatric or mood symptoms*

Common reasons for referral

If your patient has a primary neurological diagnosis and there are concerns related to any of the following, either from the parent report or your impression, then a referral to Neuropsychology might be indicated.

- Learning/retention or memory problems
- Attention or processing speed problems
- Executive functioning (e.g., disorganization, forgetfulness, prioritizing)
- Reduced adaptive functioning or independence with activities of daily living (ADLs)
- Emerging adult transition or post high school planning
- Risk for neuropsychological impairment
- Speech/language, fine/gross motor, and/or global developmental delay
- Social development
- Emotional symptoms
- Behavior problems (e.g., hyperactivity, impulsivity, aggression)
- Medication monitoring
- Follow up evaluation (established patient)
- Rule out autism spectrum disorder

Documentation requirements

When referring your patient, please be sure to include:

1. Clinical notes documenting the neurological/medical diagnosis and patient demographics.
2. Any imaging done to support the injury, if applicable.
3. Copy of current IEP/504 plan and any previous psychological, psychoeducational or neuropsychological evaluation reports, if appropriate and available.

Other resources

If your patient does not have a primary neurological diagnosis but needs a psychological evaluation, please contact our office at **404-785-2849** for recommendations.

Primary care guideline for new-onset seizure

First-time unprovoked nonfebrile seizure assessment

The recommendations in the following guideline do not indicate an exclusive course of treatment. The intent is to build a multifaceted system of care for pediatric patients and provide a framework for clinical decision-making.

Health history is key in determining if a seizure has occurred and if it is the first episode. History should be as detailed as possible and given from a reliable observer. This will help determine what further evaluation is necessary.

Documentation should include:

History

- Age
- Family history of seizures
- Developmental status
- Behavior
- Health at seizure onset (fever, illness, exposures to illness, sleep)
- Past medical history
- Precipitating events other than illness (trauma, toxins, ingestions)

Seizure characteristics

Detailed description of all aspects of the seizure, including:

- Aura (subjective)
- Behavior (mood or behavior changes prior to onset)
- Vocal symptoms (cry, speech changes)
- Motor symptoms, including, but not limited to:
 - Head or eye movements
 - Jerking
 - Posturing
 - Stiffening
 - Automatisms (lip smacking, finger rolling)

- Generalized or focal movements
- Respiratory symptoms (change in pattern or cyanosis)
- Autonomic symptoms (drooling, incontinence, pallor, vomiting)
- Decrease or loss of consciousness
- Duration of the seizure

Symptoms following seizure

- Amnesia
- Confusion
- Lethargy
- Sleepiness
- Headaches
- Muscle aches
- Transient focal weakness
- Nausea or vomiting

In addition a complete physical exam, a complete neurologic exam should be performed and documented.

Lab evaluation

For patients younger than 6 months old, there is some evidence to support lab screening in the absence of specific suggested features. For patients older than 6 months old, routine lab screens are not recommended for first nonfebrile seizures without suggestive history or symptoms. Suggested lab screens include serum electrolytes, including calcium and magnesium.

Lab tests should be ordered based on the patient's clinical characteristics and history, such as vomiting, diarrhea, dehydration or persistent abnormal mental status.

- If there is any concern for drug exposure or abuse, perform a toxicology screening.
- If case suggests meningitis or encephalitis, perform a lumbar puncture.

Electroencephalogram (EEG)

An EEG is recommended as part of the evaluation for all children with a first-time unprovoked nonfebrile seizure to determine seizure classification and epilepsy syndrome.

Diagnostic imaging

The goal of the initial imaging is to try to classify the seizures as focal or generalized.

Many generalized seizures have focal onset, which is often missed but frequently associated with focal epileptiform on an EEG, and therefore will be classified as a focal seizure with second generalization.

Emergent neuroimaging is indicated for children with persistent postictal neurological deficits or for abnormal mental status persisting for several hours after the seizure. Request an urgent neurology consult.

Nonemergent imaging is indicated in children with abnormal development and/or a history of abnormal neurological examination if neuroimaging has not been done before.

Nonemergent imaging is an MRI of the brain.

After the second seizure or focal seizure, a nonemergent MRI is always indicated. Children of all ages are possible candidates for neuroimaging.

Diagnosis

Identify the diagnosis

- Dx1 seizure type: focal or generalized
- Dx2 epilepsy syndrome (remote): can be either symptomatic or genetic
 - Symptomatic: Focal lesion on imaging, intellectual disability, neurological abnormality, etc.
 - Genetic (presumptive): Absence, juvenile myoclonic, benign rolandic epilepsy, positive family history, etc.

Recurrence

It is difficult to predict if a child will have a second seizure. Many children will not have a recurrence. Risk for seizure

recurrence for developmentally normal children with normal imaging and EEG is 33%. Risk of seizure recurrence with an epileptiform EEG generally exceeds 70%.

Treatment

If the first seizure is status epilepticus (a seizure that lasts at least five minutes), consider initiating anticonvulsant therapy. Physicians may consider providing a prescription for rectal Diastat to be used for subsequent seizure lasting longer than five minutes. Remember to provide the guardian with seizure first-aid education, instructions on how to use Diastat and directions to call 911 the first time Diastat is given.

- The protocol for Diastat AcuDial is based on age and weight:
 - Ages 2 to 5: 0.5 mg/kg
 - Ages 6 to 11: 0.3 mg/kg
 - Ages 12 and up: 0.2 mg/kg
- Doses are available in 2.5 mg intervals, so dosages should be: 2.5, 5, 7.5, 10, 12.5, 15, 17.5 or 20 mg.
- Diastat cannot be given in doses larger than 20 mg for any age.
- There is a smaller Diastat tip (4.4 cm) for smaller children (the larger tip is 7 cm).
- The syringes are available in 2.5 mg, 10 mg and 20 mgs. The pharmacist should lock the syringe at the appropriate dose. A green ring will appear when this is done.

Referral is indicated for:

- Prolonged, focal or second seizures or developmental delay/neurodevelopmental disability.
- Findings on initial workup indicating underlying etiology or true epileptic syndrome (developmental delay, abnormal neurological exam, abnormal neuroimaging or abnormal EEG).
- Patient or parental anxiety.

Documentation of medical history and physical, including all indicated laboratory, neuroimaging and neurodiagnostic studies, should be provided to the consulting physician.

Acknowledgments

A special thanks to Kids Health First and Joann Janas, MD, for their original protocol development, which is evidence-based and therefore part of this guideline. Kids Health First has been using this protocol for several years and have experienced positive outcomes with managing their patients with their first-time unprovoked seizure.

This guideline was developed through the efforts of Children's Healthcare of Atlanta and physicians on the Children's medical staff in the interest of advancing pediatric healthcare. This guideline is a general guideline and does not represent a professional care standard governing providers' obligation to patients. Ultimately, the patient's physician must determine the most appropriate care.

If your patient has an emergent or life-threatening condition, stop and call 911, or send them to the nearest hospital emergency department.

Primary care guideline for new-onset seizure

Children'sSM
Healthcare of Atlanta

First-time unprovoked nonfebrile seizure assessment

1. Obtain a detailed history, physical and neurological exam

Seizure history: Age, family history of seizures, developmental status, behavior, health at seizure onset, past medical history, precipitating events (other than illness)

Seizure characteristics: Aura, behavior, vocal symptoms, motor, generalized or focal movements, respiratory symptoms, autonomic symptoms, decrease or loss of consciousness, duration of seizure

Symptoms following seizure: Amnesia, confusion, lethargy, sleepiness, headaches, muscle aches, transient focal weakness, nausea or vomiting

2. Consider diagnostic testing

Lab testing

- Under 6 months old—lab screens of serum electrolytes including calcium and magnesium
- Over 6 months old—lab screening not recommended unless suspected:
 - Drug exposure (toxicology screening)
 - Meningitis or encephalitis (lumbar puncture)

Neurophysiology

- Electroencephalogram (EEG)

This test is recommended for patients of all ages. Inform the patient's family that a neurologist will review and interpret the EEG.

 - When ordering an EEG, write "NOS" or "new-onset seizure" on the order form, and the test will be scheduled within three business days.

Visit choa.org/eegorderform to download the EEG order form.

Neuroimaging

- MRI

This test is only recommended for a second seizure.

 - When ordering an MRI, order one without contrast. Indicate the reason for the exam as "new-onset seizure" or "NOS" on the order form.

Emergent imaging and neurology consult are needed if the patient has:

- Persistent postictal neurological deficits.
- Abnormal mental status persisting several hours after seizure.

3. Identify diagnosis and treatment

Identify diagnosis

- Dx1 seizure type—focal or generalized (EEG can help classify)
- Dx2 epileptic syndrome—symptomatic (abnormal MRI or neurodevelopmental disability) or genetic (presumptive)

Treatment

- Prescribe the rectal gel Diastat as needed for recurrent seizure.
- Provide the guardian with seizure first-aid education (turn patient on side and keep track of how long seizure lasts), instructions on how to use Diastat (if the seizure continues longer than five minutes, give Diastat rectally) and directions to call 911 after using Diastat for the first time.

4. Determine need for referral to neurologist

Referral is indicated for:

- Prolonged or second seizure.
- Developmental delay/neurodevelopment disability.
- Initial workup finding underlying etiology or true epileptic syndrome.
- Patient or parental anxiety.

Neurologists are available for consultations Monday through Friday.

- 8 a.m. to 5 p.m.
- Phone: **404-785-DOCS (3627)**

Documentation of medical history and a physical, including all indicated laboratory, neuroimaging and neurodiagnostic studies, should be provided to the consulting physician.

This guideline was developed through the efforts of Children's Healthcare of Atlanta and physicians on the Children's medical staff in the interest of advancing pediatric healthcare. This guideline is a general guideline and does not represent a professional care standard governing providers' obligation to patients. Ultimately the patient's physician must determine the most appropriate care.

If your patient has an emergent or life-threatening condition, stop and call 911, or send them to the nearest hospital emergency department.

MRI and CT Scans

Guidelines for sedation

Below are our basic guidelines for sedation when referring a patient for a MRI or CT scan at Children's Healthcare of Atlanta. If you have questions, call the pre-screening team at **404-785-2483** (Monday through Friday, 7 a.m. to 5 p.m.) or **404-785-DOCS (3627)**.

MRI

8-week, full-term infants to age 6

Patients will be evaluated for sedation by the pre-screening team.

Children ages 7 and older

Sedation will be determined by the length and complexity of the scan as well as the following:

- Does the child have autism? ☐ Yes ☐ No
- Does the child have developmental delays? ☐ Yes ☐ No
- Does the child have tics, Tourette's or involuntary movement? ☐ Yes ☐ No
- Can the child follow directions? ☐ Yes ☐ No

Most children ages 7 and older are encouraged to attempt the scan without sedation. Children who are awake during the scan can watch a movie on our special movie screen. Children are encouraged to bring their favorite DVD.

Adolescents

If the ordering physician and/or parent feels as though the teenager will only need a mild sedative, please write them a prescription for an anxiolytic when ordering the scan.

CT

Infants < 6 months

- Most infants ≤ 3 months are excellent candidates for the feed and bundle technique. Pre-term infants may be more successful.
- The success rate for the feed and bundle technique decreases significantly for infants > 3 months and is not recommended for infants > 6 months.

Infants > 6 months to age 5

- If the scan is performed with contrast, the child will require sedation.
- If the scan is performed with Orbit, Sella or Ear, the child will require sedation for quality imaging.

Children ages 6 and older

Children ages 6 and older can complete most CT scans—with and without contrast—without sedation unless the child has a developmental delay or autism.

Children's Physician Group— Rheumatology

Children's
Healthcare of Atlanta

Guidelines for referrals

Below is a list of guidelines to follow when referring a patient to Children's Physician Group—Rheumatology for a consultation. These are meant to be general guidelines. If you have specific questions, call 404-785-DOCS (3627) and ask to speak with the on-call rheumatologist.

Conditions treated

- Ankylosing spondylitis
- Behcet's disease
- Chronic recurrent multifocal osteomyelitis (CRMO)
- Granulomatosis with polyangiitis (Wegener's)
- Juvenile dermatomyositis
- Juvenile idiopathic arthritis (JIA)
- Microscopic polyangiitis
- Mixed connective tissue disease
- Morphea/localized scleroderma (in conjunction with dermatology)
- Periodic fever syndromes
- Psoriatic arthritis
- Polyarteritis nodosa
- Sarcoidosis
- Sjögren's syndrome
- Systemic lupus erythematosus
- Systemic sclerosis/scleroderma
- Uveitis (along with ophthalmology)

Urgent referrals

If you feel your patient needs to be seen immediately, denote **“urgent”** on the rheumatology referral form. **All referrals marked “urgent” are triaged to help make sure patients are seen in a timely fashion.** If you wish to speak to the on-call pediatric rheumatologist, call 404-785-DOCS (3627). Generally, conditions that may warrant an urgent initial outpatient visit include, but are not limited to:

- Persistent joint swelling (chronic arthritis is defined as ≥ 6 weeks) without antecedent trauma. Starting an NSAID such as ibuprofen or naproxen may be warranted. We do not advocate giving these patients oral steroids prior to the initial consultation visit, as they may obscure alternative diagnoses and signs of arthritis.
- Significant joint contractures affecting function.
- Joint pain and swelling with persistent fevers ($>101^{\circ}$ F) without infectious or oncologic etiology.
- A persistent malar rash with mild cytopenias, signs of serositis (pleural effusion on X-ray or pericardial effusion on echocardiogram) or mild proteinuria (send first morning urine protein: creatinine).
- A dermatomyositis rash (i.e., persistent pink scaly papular rash over MCPs, PIPs, elbows and/or knees, or malar rash) with signs of weakness or elevated muscle enzymes (i.e., AST, ALT, CK or LDH).

Non-urgent referrals

There are several conditions we see that may not warrant an urgent evaluation given the available resources. These may include the following:

- Chronic pain with sleep disturbances, fatigue, diffuse joint or muscle pain with normal exam, and normal CBC and acute phase reactants do not require an urgent appointment. These patients can be managed by the primary care provider with counseling or by the pain service if severe. A positive ANA test without other symptoms, exam findings or abnormal labs (i.e., CBC, ESR, CRP, CMP, urinalysis, muscle enzymes, TSH or free T4) does not change this recommendation.

- Children with musculoskeletal pain but no signs of inflammation (i.e., swelling, warmth or decreased range of motion) seldom have a chronic rheumatic condition, even if they have a positive ANA test. Consider X-ray to evaluate for fracture, cancer and consider trial of NSAIDs, physical therapy and increased physical activity. Children with prolonged episodes of intermittent leg pain at night with normal daytime activities and normal studies (i.e., CBC, ESR, CRP or X-ray) usually have “growing pains” and do not necessarily need a rheumatologic evaluation.
- Raynaud’s phenomenon is a common complaint in tall, thin teenage girls in winter months. Most of these patients—as long as they do not have other concerning symptoms or exam abnormalities—have primary Raynaud’s phenomenon and no underlying rheumatic disease. Labs that are helpful in evaluating these patients and could be obtained prior to referral include: CBC with differential, ESR, CRP, CMP, ANA IFA and anti-phospholipid antibodies. Make sure patients keep core and extremities warm by wearing warm gloves and socks, and by using heat packs.
- Abnormal lab findings, such as a positive ANA or positive rheumatic factor at a low titer, in the absence of objective clinical findings usually do not require rheumatologic evaluation.

Conditions seen by other specialists

There are some conditions that may warrant the expertise of other specialties, even though joint pain might be one of their manifestations.

- **Fibromyalgia/amplified musculoskeletal pain syndrome:** For patients with chronic widespread pain where you suspect fibromyalgia, make a referral to the Pain Relief Clinic as well. The wait is often long for these patients. If they wait to see rheumatology before a referral to the Pain Relief Clinic is made, they will wait even longer to be seen in the Pain Relief Clinic. Our primary role is to exclude a rheumatic disease that might be present concomitantly.
- **Non-inflammatory connective tissue disorders** (i.e., Ehlers Danlos syndrome or Marfan’s syndrome): Refer to the Genetics Clinic. Also consider a cardiology evaluation to screen for cardiac manifestations of connective tissue disease.

Referrals and medical records

All referrals marked “urgent” are triaged to help make sure patients are seen in a timely fashion. The on-call rheumatologist is available to discuss any case or concern by calling 404-785-DOCS (3627). A rheumatology referral form is available to aid in communication of clinical data.

- Non-urgent referral requests should be faxed to 404-785-9111.
- Urgent referral requests should be faxed to 404-785-9096.

Make sure all appropriate records are faxed to our office prior to the patient’s visit. This includes the office visit notes, imaging studies (i.e., X-rays or MRI) and lab results. If lab results are pending at time the records are faxed, send the complete results when available.

If the patient had imaging studies, ask the family to bring a CD with the images to their rheumatology appointment.

If the patient has already seen other specialists related to their symptoms (i.e., ophthalmology or orthopaedics), send these records to us as well.

Autobús de MARTA*

Se puede llegar al Center for Advanced Pediatrics a través de varias rutas de autobús de MARTA: la Ruta 8 North Druid Hills Road, la Ruta 47 de I-85 Access Road y la Ruta 30 La Vista Road que se conecta con la estación de Lindbergh Center.

*Las rutas pueden cambiar. Visite itsmarta.org o llame al 404-848-5000 para obtener más información.

Visite choa.org/locations para obtener mapas e indicaciones de cómo llegar desde cualquier lugar.

Play para descargar la aplicación gratuita de Children's Healthcare of Atlanta para su teléfono inteligente o tableta.

Tenga en cuenta que las obras de construcción podrían afectar las rutas habituales. Le recomendamos verificar su recorrido en busca de posibles obstrucciones, desvíos o retrasos.

Judson L. Hawk Jr., MD, Clinic for Children

Children'sSM
Healthcare of Atlanta

About our multidisciplinary clinics

The Judson L. Hawk Jr., MD, Clinic for Children—located on the sixth floor of the Center for Advanced Pediatrics—offers multispecialty outpatient treatment for children with a wide range of medical and social complexities. By housing several outpatient services together, families have a place where they can receive coordinated care. This model builds upon the clinic concept that Judson L. Hawk Jr., MD, helped initiate more than 30 years ago.

Our clinics:

Brachial Plexus

Brachial plexus birth injuries, brachial plexus birth palsy

Cerebral Palsy/Spasticity

Motor skills, muscle weakness

Concussion

Complex concussions

Differences in Sex Development

Ambiguous genitalia, intersex

Neurogastroenterology and Motility

Abdominal pain, incontinence, constipation, difficulty swallowing

Genetics

Craniofacial genetics, developmental delay, pigmentary disorders, Café au lait spots, neurofibromatosis, autism spectrum disorders

Medically Complex Care

Cerebral palsy, hypoxic ischemic encephalopathy, mitochondrial diseases

Muscular Dystrophy

Spinal muscular atrophy, Duchenne, Becker, myotonic diagnosis

Neurofibromatosis/Tuberous Sclerosis

Skin abnormalities, neurological symptoms

Neuro Spine

Back and neck pain, herniated discs, spinal degeneration

Osteogenesis Imperfecta

Easily broken bones, bone deformities, barrel-shaped rib cage, spinal curvature, loose joints, muscle weakness

Pain

Musculoskeletal, inflammation, abdominal pain

Pelvic and Anorectal Care

Hirschsprung's disease, anorectal malformations, idiopathic constipation, pelvic and spinal tumors

Procedures

Neurology and physiatry procedure clinics

Spina Bifida

Hydrocephalus, bowel problems, mobility weakness

Strong4Life

BMI's outside of height and weight range coupled with weight-related illness

Vascular Anomalies

Hemangiomas, capillary malformations, vascular malformations, venous malformations, lymphatic malformations, arteriovenous malformations

Revised: June 19, 2023

Children's
Healthcare of Atlanta

accessCHOA

Getting started

What is accessCHOA?

AccessCHOA is a tool that provides real-time web access to patient information, comprised of different web pages or activities that correspond to different tasks. The activity that you use depends on what you want to accomplish. For example, if you want to see detailed information about a patient's lab results, you can use the Results Review activity.

This tip sheet includes information to help you get started, including browser requirements, and how to log in and log out. Each section contains information on how to accomplish the task, along with a picture of the activity for quick reference. Note that these images may differ slightly from what you see when you are using accessCHOA.

Browser, system and connection requirements

We strongly recommend a high-speed internet connection for optimal performance. Your browser must be Java enabled, and you must use one of the following internet browsers to use accessCHOA:

- Microsoft Internet Explorer 8.0 or 11.0 (for Microsoft Windows platforms)
- Mozilla Firefox 3.0 (for Microsoft Windows platforms and Mac OS X platforms)

You also need a minimum screen resolution of 1024x768 pixels, and Adobe Reader must be installed to view documents.

Why use accessCHOA?

This web application is designed to extend continuity of patient care by providing community physicians secure access to select patient information in the patient's medical record. Typical users are physicians, physician assistants, nurse practitioners, nurses and office staff who require access to patient clinical, demographic and insurance information at Children's.

Users must complete several steps to gain secure access to accessCHOA.

1. Identify individuals in your practice who will require access to accessCHOA. Note that you must identify any physician or provider for whom you would like to see patient information.
2. Include all users who will need access to accessCHOA on the **New Practice Request Form** at accesschoa.org. Be sure to complete all required information.
 - Complete the contact information section at the top of the form.
 - Enter the first name, middle initial, last name, job title and/or practice role of each office staff member.
 - The last four digits of the Social Security number is a Children's standard for creating Epic login IDs for each nonemployed individual who will access confidential patient information.
 - An email address must be provided for each provider or other professional who will use accessCHOA. The email address is used to return the users' login information, and can also be used to notify users of certain patient events, such as a new lab result or admission.

- Once all information is complete, submit the New Practice Request Form using the **"Submit"** button at the bottom of the form. Once the practice and users are approved, an email with the user's login information is generated and sent to each user.
- Go to accesschoa.org to sign in to the web application.

Note: First-time users are asked to accept the Terms and Conditions. Click **"Accept."**

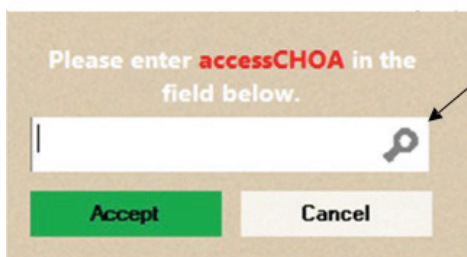

How do I log in?

- Enter the following URL: accesschoa.org
- Enter the **"User ID"** that you received in your welcome to accessCHOA email in the User ID field.
- Press **"Tab"** to move to the **"Password"** field. Enter the password that you received in your welcome to accessCHOA email.
- After you have entered your user ID and password correctly, press **"Enter,"** or click the **"Log In"** button.
- You will be prompted to change your password, which is required.
- When the **Terms and Conditions** page appears, read the agreement and click **"Accept"** to acknowledge your agreement with the terms. You are now logged in to accessCHOA.

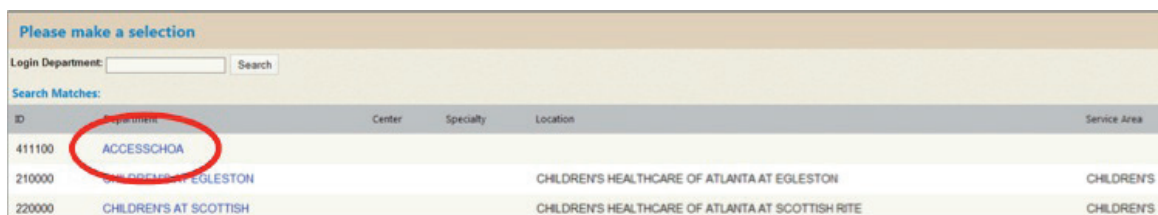

Note: Terms and conditions will appear when they are updated and on an annual basis.

- You may be prompted to identify a department when logging in to accessCHOA.

If you see this screen, click on the magnifying glass,

and choose the accessCHOA department.

ID	Department	Center	Specialty	Location	Service Area
411100	ACCESSCHOA				
210000	CHILDREN'S EGGLESTON			CHILDREN'S HEALTHCARE OF ATLANTA AT EGGLESTON	CHILDREN'S
220000	CHILDREN'S AT SCOTTISH			CHILDREN'S HEALTHCARE OF ATLANTA AT SCOTTISH RITE	CHILDREN'S

If this is the most common way you log in to the system and would like to have accessCHOA as your default department, contact us at **404-785-6767** and we can make that change for you.

Note: If you see patients at our facilities and log in to **"hyperspace,"** any changes to your default department in accessCHOA will change your department there as well.

How do I log out?

To maintain patient confidentiality, you need to log out, or use a secure screen when finished or leaving the computer for any reason. There are two ways to do this:

1. Click  to log out of accessCHOA. The next time you log in, you are directed to your start page.
2. Secure the computer by clicking . When you log back in, you are returned to the same page you were using before securing the screen. There is no need to navigate back to the page you were previously working on.

Show time-out warning

After **20 minutes** of inactivity, your accessCHOA session will time out. If your session is about to time out, a warning message appears in the application banner. Until you perform an action, such as clicking on a page or typing, the session times out.

What if I forget my password?

See your site administrator or call the solution center at **404-785-6767**.

Help and contact information

For help using an activity, click  on the web page.

Additional tip sheets can be found within the accessCHOA application on the training page.

Contact the Children's Solution Center at **404-785-6767** if you have any questions or concerns.

Sports medicine physician vs. sports physical therapist

Children'sSM
Healthcare of Atlanta

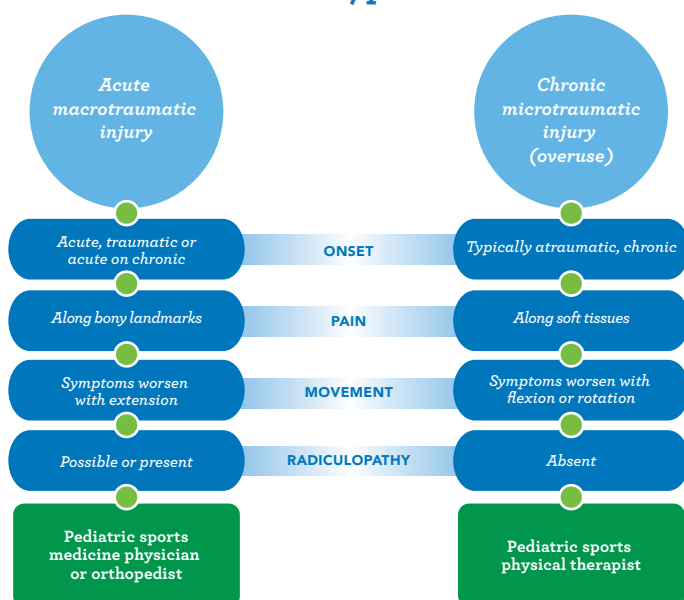

Your reference guide

Use these guidelines to support your clinical decision to refer a patient to a pediatric orthopedic physician or a pediatric sports physical therapist. Follow the center categories and choose the appropriate corresponding column based on your patient's case history. If the majority of responses fall in the acute macrotraumatic injury column, we recommend the patient see an orthopedic physician. Conversely, if most responses fall in the chronic microtraumatic injury column, the patient may be sent directly to sports physical therapy.

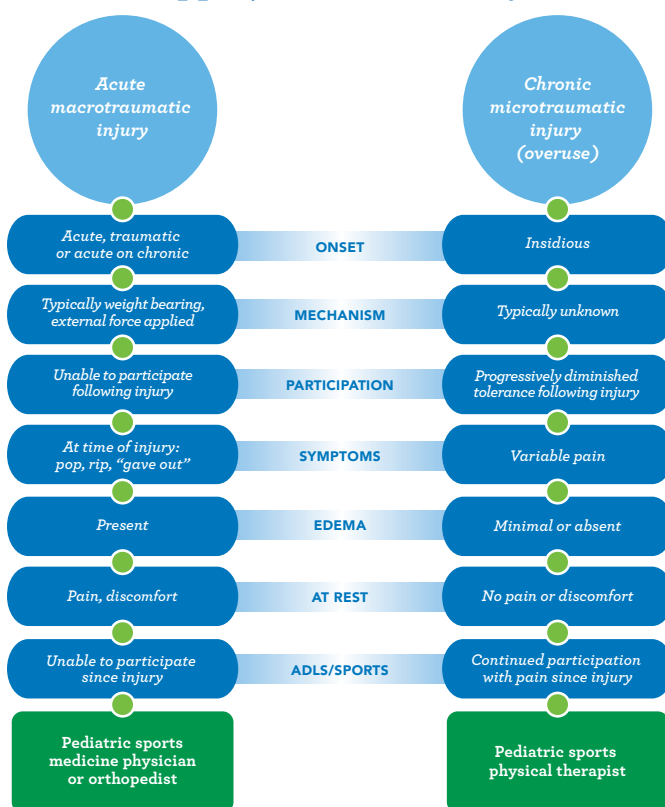

About our Sports Medicine Program

When it comes to treating growing athletes, there's no competition. Our Sports Medicine Program is dedicated exclusively to caring for growing athletes. Our sports medicine professionals, including sports medicine primary care physicians and sports physical therapists, are trained specifically to take care of kid and teen athletes. We provide complete, coordinated care from diagnosis to treatment to rehabilitation. We have 14 orthopedic and sports medicine clinics, and offer sports physical therapy at 11 locations across metro Atlanta.

Back pain cervical/thoracic and lumbar/pelvic

Extremity pain upper/lower extremity

To make a physician referral, choa.org/md or call 404-785-DOCS. For sports physical therapy referrals, call 404-785-8660. See our locations and providers at choa.org/sportsmed.

If your patient has an emergency or life-threatening condition, stop and call 911 or send them to the closest hospital emergency department. This guide is for informational purposes only. Providers must use their own clinical judgment in referring their patients, as each situation is different.
