# Resources

# **Patient family resources**

## 404-785-KIDS (5437)

This number is the primary point of contact for patient families. This phone number, staffed by a team of experienced Children's Healthcare of Atlanta representatives, is open 24 hours a day, seven days a week. Patient families can use **404-785-KIDS (5437)** to:

- Access Children's services.
- Schedule and change appointments.
- Reach a physician or department at Children's.

## **MyChart**

MyChart gives you, your patients and their legal guardians access to a portion of their Epic medical record. It also enables you and your patients to communicate through a secure online portal or mobile device. With MyChart, your patient families can be more informed, which can lead to improved satisfaction and outcomes. Patient families can:

- View immunization records.
- View lab and other test results and get notifications when most results are received.
- Request prescription refills.
- Communicate with you by sending and receiving secure messages.

Patient families should visit **mychart.choa.org** to activate a MyChart account.

## Choa.org

Patient families can use the Children's website to:

- Learn more about our medical services and physicians on our medical staff.
- Find information, including hours and directions to specific locations.
- Prepare for visits and overnight stays.
- Request copies of medical records.
- Contact our team with questions about billing and insurance.

## Mobile app

The Children's app is designed to give families easy access to the things they need most from Children's.

With the Children's app, patient families can:

- Access the MyChart Patient Portal which allows them to pay their bill online, communicate with their child's doctor, manage their child's appointments, complete forms, receive reminders, and access test results and records.
- View amenities and services available during their visit.
- Find care, check wait times, get directions, find the nearest Children's Emergency Department or Urgent Care Center, and look up physicians on Children's medical staff.

# **Children's locations**

Children's offers urgent care, X-ray, lab and emergency services at the following locations:

1. Arthur M. Blank Hospital

2220 North Druid Hills Road NE Atlanta, GA 30329 Walk-in lab and walk-in X-ray

2. Hughes Spalding Hospital

35 Jesse Hill Jr. Drive SE Atlanta, GA 30303 Walk-in X-ray

3. Scottish Rite Hospital

1001 Johnson Ferry Road NE Atlanta, GA 30342 Walk-in lab and walk-in X-ray

- 4. Children's at Chamblee-Brookhaven\*\* In the Parkview on Peachtree shopping center 5080 Peachtree Blvd., Suite 100 Chamblee, GA 30341 Urgent care
- 5. Children's at Cherokee

In the River Pointe shopping center 1558 Riverstone Parkway, Suite 100 Canton, GA 30114 Urgent care

6. Children's at Forsyth\*\*

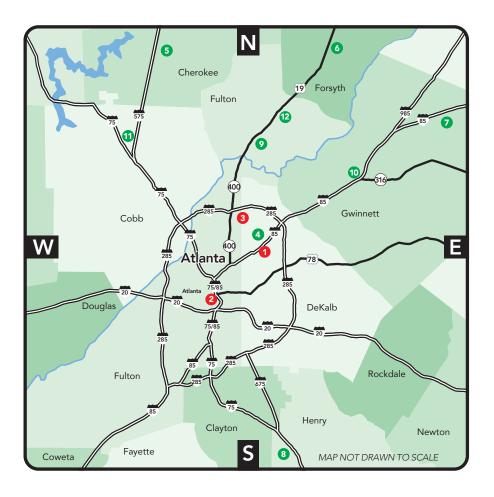

In The Collection at Forsyth 410 Peachtree Parkway, Suite 300 Cumming, GA 30041 Urgent care, walk-in X-ray\*

#### 7. Children's at Hamilton Creek

In the Hamilton Mill Town Center 2240 Hamilton Creek Parkway, Suite 600 Dacula, GA 30019 Urgent care

#### 8. Children's at Hudson Bridge\*\*

Children's Healthcare of Atlanta at Hughes Spalding es propiedad de Fulton-DeKalb Hospital Authority y es dirigido por HSOC Inc., institución asociada a Children's.

# **Physician resources**

As one of the largest pediatric healthcare systems in the country, Children's offers a variety of ways for physicians to reach our staff and clinical services. Visit **choa.org/md** for more information about these services as well as access to our online forms, clinical practice guidelines and more.

## accessCHOA

AccessCHOA is the web-based interface for the Children's electronic health record system. It provides customized notifications about patient events, which can be forwarded to anyone in your practice. In addition, you can use it to:

- Place an order for outpatient diagnostics and rehabilitation.
- Place referrals to Children's Physician Group specialists and specialty clinics.
- View notifications about key patient events, including admissions and discharges, emergency visits, and lab and imaging results.
- Check appointment status and patient scheduling information. AccessCHOA is the primary way your practice will receive patient information. To enhance patient confidentiality, Children's will eventually eliminate faxing patient information to your practice.

Ask your physician liaison or visit **accessCHOA.org** to register and review educational resources. See the Tools section for a tip sheet about accessCHOA.

## 404-785-DOCS (3627)

Children's strives to reduce barriers for accessing healthcare services. By using this easy-to-remember phone number, physicians can connect to anyone or any service within our organization.

**404-785-DOCS** is staffed 24 hours a day, seven days a week by a team of experienced Children's representatives who will promptly answer your call, evaluate your needs, provide the services requested or route you to the appropriate area.

#### Call 404-785-DOCS (3627) to:

- Access any Children's service.
- Reach a hospitalized patient, Children's employee or department at Children's.
- Assist in scheduling a patient appointment or ancillary test.
- Refer a patient to a Children's Physician Group practice.
- Speak to a Children's Physician Group provider for collaboration or advice during business hours through our physician-to-physician service.

## **Transfer Center**

The Children's Transfer Center can arrange for the acceptance and admission of your patient with one phone call, 24 hours a day, seven days a week. We can help:

- Coordinate ground or air transportation for your patient.
- Arrange for a bed with the appropriate level of care to be ready upon arrival.
- Initiate registration paperwork, including financial information and pre-certification.

## Call **888-785-7778** or **404-785-7778** to reach our Transfer Center.

#### Scheduling elective admissions:

If you need to schedule an admission to Children's and you do not have attending privileges, the Children's Hospitalist Program can assist you with:

- Telephone consultations.
- Inpatient management services.
- Outpatient diagnostic referrals.
- Specialist referrals.

See the Tools section for our Emergency Department transfer guidelines.

## **Telehealth**

The Telehealth Program at Children's allows our pediatric specialists to provide care remotely to your patients through the use of technology when it is clinically safe and appropriate to do so.

Telehealth uses two-way interactive video over a secure, HIPAA-compliant network. Telehealth visits with Children's can take place in the comfort of a patient's home or at another private location.

Refer your patient for an in-person visit with a Children's pediatric specialist. Our team will determine whether a telehealth visit is appropriate. Patient families may ask their provider if a telehealth appointment is a suitable option for their next visit.

## **Physician outreach**

A physician liaison is your primary contact for questions, concerns and issues. Physician liaisons help with:

- Barriers to access.
- In-services.
- Order forms or materials.

To learn more visit **choa.org/outreach**.

#### Meet our liaisons

#### Blair Boone, Physician Liaison

Regions: Atlanta, Clayton, Henry, Rockdale blair.boone@choa.org or 404-718-9426

**Brittney Stephens, Physician Liaison** Regions: Cobb, Douglas brittney.stephens@choa.org or 404-713-5871

# The Children's Care Network (TCCN)

The Children's Care Network (TCCN) is a clinically integrated partnership between Children's and community physicians designed to help facilitate better health outcomes for our patient population. The collaborative system also offers group purchasing power, cost savings and technical resources.

To find out more about our clinically integrated network, email contact@tccn-choa.org, call 404-785-7935 or visit tccn-choa.org.

## GastroenterologyGeneral surgery

## **Physician-to-physician service**

Physician-to-physician is a service offered through **404-785-DOCS (3627)**. The goal of this service is to provide you with improved access to Children's Physician Group practices during business hours. A designated provider for participating Children's Physician Group practices is available Monday through Friday from 8 a.m. to 5 p.m., excluding holidays, to respond to your non-urgent clinical inquiry.

Physician-to-physician consultations should be requested when you need to speak with a subspecialist for advice about a patient. It should not be used for questions that do not require a subspecialist physician, such as lab results or appointment scheduling.

#### Enhancements

To improve your experience with our physician-to-physician service and better meet your needs, we have made the following enhancements:

- Non-urgent, established patients: Our turnaround time has been designated to 24 hours.
- Urgent, established or non-established patients: Our turnaround time has been designated to 60 minutes. In more than 60% of cases, you will be connected directly with a subspecialist.
- **Escalation:** If you do not receive a call back in the designated time frame, call 404-785-DOCS (3627) and your call will be escalated to practice leadership.

## **Refer a patient**

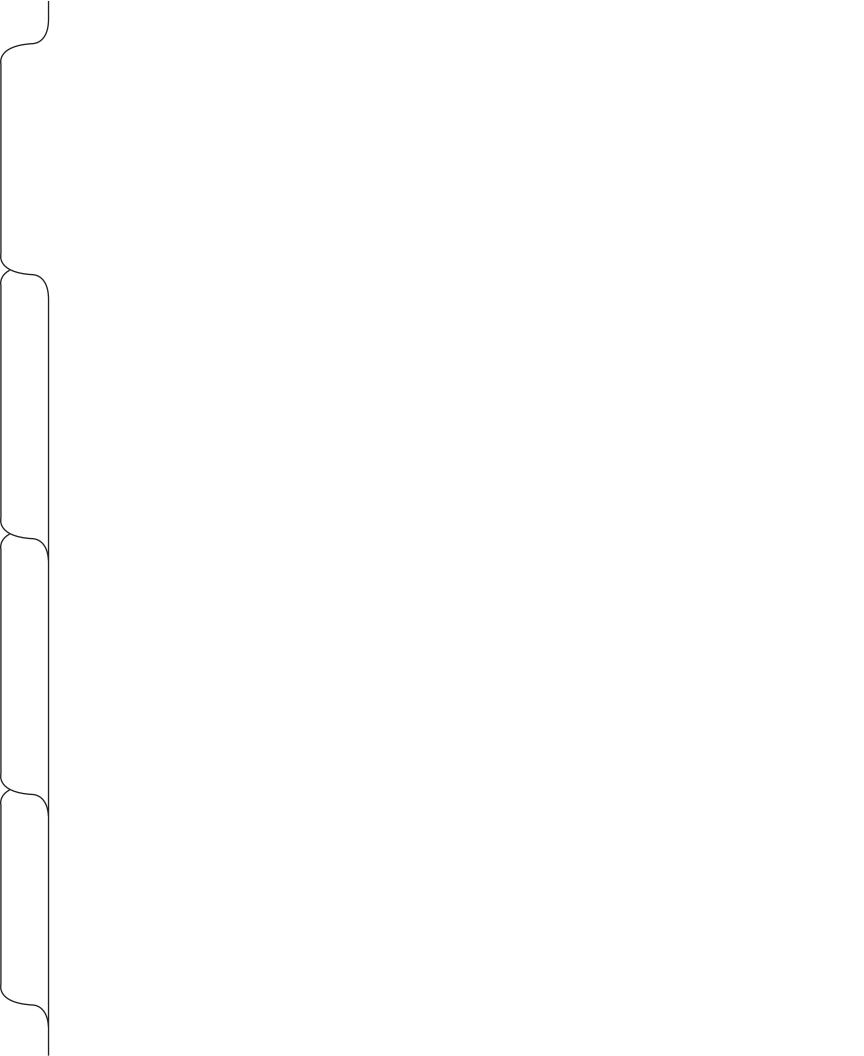

At Children's, we want to make it easy for you to submit a referral to our pediatric specialty practices.

To refer a patient, use one of the following methods:

- accessCHOA: AccessCHOA is a free, secure, web-based electronic health record system that provides physicians the ability to electronically submit referrals to Children's Physician Group specialists. It also provides instant access to your patients' information, customized notifications about patient events, and the ability to view the referral status and results.
- **choa.org/referral:** Visit the Children's website for access to the Children's Physician Group online referral form. Upload relevant clinical documents, patient demographics and imaging/diagnostic tests with the click of a button.
- Fax: See the Forms section for a hard copy of the Children's Physician Group referral form. Completed forms may be faxed to 404-785-9111.

See the Contact information section for a listing of Children's Physician Group ambulatory specialties, physicians and locations.

Columbus (2<sup>nd</sup> and 3<sup>rd</sup> Wed) 705 17<sup>th</sup> St., Suite 406 Columbus, GA 31901 Drs. Chahine, Santore

#### **GENERAL SURGERY (CONTINUED)**

#### Surgeons:

Hanna Alemayehu, MD Associate Professor, Emory University School of Medicine

Ross Beckman, MD Interests: neonatal surgery, minimally invasive surgery, chest wall abnormalities, surgical oncology, ECMO

### Amina Bhatia, MD, MS, FACS, FAAP

Interests: Hirschsprung disease, minimally invasive surgery, neonatal surgery and prenatal consults, patent ductus ligation, pectus repair, thoracic and trauma surgery

## David Carney, MD

Medical Director, Trauma, Scottish Rite Hospital Professor, Emory University School of Medicine Interests: minimally invasive surgery, surgical

oncology, neonatal surgery, gastrointestinal surgery, hepatobiliary surgery

## A. Alfred Chahine, MD, FACS, FAAP Associate Professor,

Emory University School of Medicine Matthew Clifton, MD,

FACS, FAAP Division Chief, General Surgery Associate Professor, Emory University School of Medicine

Interests: hepatobiliary surgery, minimally invasive surgery, prenatal consultation and newborn surgery, surgical oncology

#### Melissa Danko, MD

Associate Professor, Emory University School of Medicine

Interests: solid tumors, thyroid disorders, minimally invasive surgery, congenital anomalies, hepatobiliary and pancreatic disorders

#### Megan Durham, MD, FACS

Practice Director. Children's Physician Group–Pediatric Surgery Medical Director, Pelvic and Anorectal Care

Surgical Director, Intestinal Rehab Associate Professor,

Emory University School of Medicine

Interests: congenital anomalies, noncardiac thoracic surgery and neonatal surgery, intestinal failure. anorectal malformations. Hirschsprung disease, surgical oncology

#### Anthony Ferrantella, MD

Allison Linden, MD

and PICU

Medical Director, NICU

#### Assistant Professor, Emory University School of Medicine Interests: neonatal surgery, minimally invasive surgery, surgical critical care, ECMO, global surgery

Jonathan Meisel, MD, FACS, FAAP Assistant Professor, Emory University School of Medicine Interests: colorectal surgery, surgical oncology, pectus excavatum, IBD, congenital anomalies, minimally invasive surgery, neonatal surgery, prenatal consults

Rodrigo Mon, MD Interests: neonatal surgery, fetal surgery

#### Matthew Santore, MD, FACS, FAAP

Medical Director, Surgical Quality Surgical Director Assistant Professor, Emory University School

of Medicine Interests: ECMO, minimally invasive surgery and single-site laparoscopic surgery, neonatal surgery, prenatal consults, endocrine surgery, thyroid surgery, surgical oncology, trauma surgery, thoracic surgery, IBD, cystic lung disease

#### Heather Short, MD

Interests: minimally invasive surgery, neonatal surgery, colorectal surgery

#### Justin Sobrino, MD

Medical Director, Trauma, Arthur M. Blank Hospital Interests: surgical critical care

Professor, Emory University School of Medicine Interests: minimally invasive surgery, neonatal surgery

# **Referral and Order Forms**

#### accessCHOA

Reminder: The fastest way to submit your order or referral is electronically, using accessCHOA.

AccessCHOA is the web-based interface for the Children's electronic health record system. It can be used to place an order for outpatient diagnostics and rehabilitation as well as for referrals to Children's Physician Group specialists\*. To learn more, see Page 4 of this guide or go to the Tools section for a tip sheet on using accessCHOA.

If you are not connected to accessCHOA, some online referral forms and order forms can be submitted electronically at **choa.org/md**.

Cardiology Referral Form. 8/2022

Children's Cardiology

### **Pediatric Cardiac Risk Assessment Form**

Please complete this form for all children (athletic participant or not) starting at the age of 6, when the American Academy of Pediatrics recommends starting preparticipation examinations (PPE). It should be completed a minimum of every 3 years, including on entry into middle school and high school. Depending on family and primary care provider concerns, more frequent or earlier screening may be appropriate.

Patient Name:	 Age:	

Person Completing Form: \_\_\_\_\_

Date: \_\_\_\_\_

Symptom Questions:	Yes	No	Unsure
Have you (patient) ever fainted, passed out, or had an unexplained seizure suddenly and without warning?			
If so, was it during exercise or in response to sudden loud noises, such as doorbells, alarm clocks, or ringing telephones?			
Have you (patient) ever had either of the following during <u>exercise</u> : 1.Exercise-related chest pain, particularly pressure-like and not occurring at rest?			
2. Unusual or extreme shortness of breath during exercise, not explained by asthma?			
Family History:	Yes	No	Unsure
Are there any immediate family members (include patient's parents or siblings) who have died before age 50 from heart problems or had an unexpected sudden death? <i>Including drownings, passing away in their sleep, sudden infant death syndrome</i> <i>(SIDS), or unexplained automobile crashes in which the relative was driving.</i>			
Are there any immediate relatives (patient's parents or siblings) with the following cond	itions?		
<ul> <li>Hypertrophic cardiomyopathy or hypertrophic obstructive cardiomyopathy (HCM/HC</li> <li>Long QT syndrome (LQTS) or short QT syndrome</li> <li>Marfan syndrome or Loeys-Dietz syndrome</li> <li>Arrhythmogenic right ventricular cardiomyopathy (ACM)</li> <li>Catecholaminergic polymorphic ventricular tachycardia (CPVT)</li> <li>Brugada syndrome (BrS)</li> <li>Anyone younger than 50 years old with a pacemaker or implantable defibrillator?</li> </ul>	ICM)		
I have no known immediate family members with the above conditions.			
Please explain more about any "yes" answers here:

# **Guidelines and tools**

# **Guidelines**

The following guidelines are meant to be general recommendations. If you have a specific question, call 404-785-DOCS (3627). Note, guidelines for additional specialties are in-progress and will be added as they are finalized.

- Emergency: Referring patients to a Children's Emergency Department
- Endocrinology: Guidelines for referrals
- Endocrine and obesity: A physician's quick guide
- Gynecology: Guidelines for referrals
- Hematology/Oncology: Guidelines for referrals
- Nephrology: Guidelines for referrals
- Neurology: Guidelines for referrals
- Neuropsychology: Guidelines for referrals
- New-onset seizures: Primary care guidelines
- Radiology: Sedation guidelines for CT and MRI
- Rheumatology: Guidelines for referrals

# **Referring patients to a Children's Emergency Department**

Children's Healthcare of Atlanta believes effective communication between community pediatricians, urgent care physicians and our Emergency Department physicians is an important part of our shared goal to provide high-quality care to our patients. Before you transfer a patient, review the following information. This will help you and patient families better connect with our services. **Do not send patients to the Emergency Department if they do not have a true emergent need.** 

If you feel as though your patient warrants a direct admission, call the Transfer Center and discuss the case with the hospitalist on call. The patient may be able to bypass a trip to the Emergency Department depending on the complaint, the acuity, the workup that has already been completed and the comfort level of the admitting team.

### Step 1: Call the Transfer Center at 404-785-7778 or 888-785-7778.

### We need to know:

- The patient's name, date of birth and sex.
- The patient's complaint and any other relevant medical, personal or other history.
- The patient's lab results. Send copies of all labs or verbally detail the lab values.
- Relevant workup that has been completed for the patient. The Emergency Department physician will review this information to avoid any duplication.
- Whether the patient needs air or ground transportation.
- Your cell phone or after-hours contact information for the Emergency Department physician to use if they have questions regarding the patient; direct cell phone numbers are preferred rather than practice numbers, because patient arrival and workup times may take place after hours.
- Whether you would like updates on your patient.

# Step 2: Decide if you need to speak to an Emergency Department physician regarding an emergent patient.

### We need to know:

- Your preferences or concerns regarding the patient.
- Your patient's specific symptoms and the disease process(es) you are concerned about.

Direct communication can help us better understand your specific concerns and your desired outcome for the visit. This may help to increase efficiency, enhance the patient experience and reduce unreasonable expectations.

### Step 3: Advise the parents/guardians on next steps.

- To help set proper patient family expectations, advise families that they may not see a specialist in the Emergency Department. The Emergency Department physicians will determine if the patient's condition requires an immediate evaluation by a specialist. This is often not required. Emergency Department physicians will also determine if the patient needs diagnostic testing, admission, etc.
- Tell them to keep the child NPO if you anticipate there may be a need for sedation or anesthesia.
- They can download the Children's mobile app to get step-by-step directions to a Children's Emergency Department. This free app can be downloaded on a mobile device by searching for Children's Healthcare of Atlanta on Google Play or the App Store. Visit **choa.org/app** to learn more.
- Have them call **404-785-KIDS (5437)** if they have questions or need to reach their child's room after they have been admitted.

### Following up on patients

- Check accessCHOA for updates on your patient or visit the physician portal to review clinical guidelines.
- If you need an update on a patient while they are in the Emergency Department, call the Transfer Center at **404-785-7778** or **888-785-7778**. Representatives will attempt to connect you with the patient's Emergency Department care provider.

### Leadership team contacts

We're here to help. Contact us if you need to connect with our leadership team regarding the Emergency Department.

### **Primary contacts**

For unresolved issues, contact our campus medical directors:

- Scottish Rite Hospital: Margaux Charbonnet, MD margaux.charbonnet@choa.org
- Arthur M. Blank Hospital: Stephanie Jernigan, MD stephanie.jernigan@choa.org
- Hughes Spalding Hospital: Chevon Brooks, MD chevon.brooks@choa.org

### Frequently asked questions

At Children's, we are committed to helping physicians experience a smooth transition from patient care in our system through discharge to the patient's primary medical home.

# Q: Does the Children's Transfer Center transfer patients to all Children's hospital campuses?

A: Yes, the Children's Transfer Center transfers patients to all Children's hospital campuses, including the Emergency Departments at Arthur M. Blank Hospital, Hughes Spalding and Scottish Rite.

### Q: Who do I call if I am not certain the patient needs to be transferred and wish to consult with an on-call pediatric specialist?

A: If you feel your patient may need to be transferred and wish to consult with an on-call specialist, contact the Transfer Center anytime at 404-785-7778. A registered nurse will assist you in coordinating this consult.

# Q: What is the difference between the Transfer Center and 404-785-DOCS (3627)?

A: The Transfer Center, **404-785-7778**, assists physicians and outside facilities with transfers into our system. The Transfer Center helps with emergent patients and transport needs and consults on patients who need immediate or real-time interventions and guidance.

Our main physician line, **404-785-DOCS**, is not for Emergency Department patients. This contact number helps you connect to Children's services for non-urgent reasons during business hours without having to remember multiple numbers.

### Q: Will I be contacted once my patient is discharged?

A: Yes. You will receive notification of patient discharge through fax. We are aware that this process needs improvement and will continue to look for ways to improve communication, specifically related to notifications of patient death. We welcome your feedback on how we can address your important concerns.

# Q: How can I help make sure that I get an update about my patient?

A: Notify the Transfer Center that you would like an update from the emergency physician and be sure to leave your direct cell phone or after-hours phone number where you can be reached. On average, it takes patients two to three hours to arrive at the Emergency Department following your referral. Evaluation and test results may take an additional two hours.

### Q: What if my patient wants to go to the Emergency Department because they need a diagnostic test or want to get in sooner to see a specialist?

A: We realize that many patient families do not wish to wait for their appointment with a specialist or want to complete a diagnostic test after hours. These nonemergent visits to the Emergency Department affect our efforts to provide care and efficient service. We are working to centralize referrals and reduce Children's Physician Group wait times. We are growing our offerings in many key specialty areas and are providing single points of contact for patients and physicians to improve patient access. We continue to rely on your support to help patient families appropriately utilize the Emergency Department.

### Visit choa.org/guidelines for clinical guidelines and resources.

# Endocrinology

# Guidelines for referrals

Below is a list of guidelines to follow when referring a patient for a consultation to Children's Healthcare of Atlanta Endocrinology. These are meant to be general recommendations. If you have specific questions, call **404-785-DOCS (3627)** and ask to speak with the on-call endocrinologist.

### Common conditions treated

- Adrenal disorders (e.g., adrenal insufficiency)
- Bone disorders
- Calcium disorders, including hypercalcemia and hypocalcemia
- Cholesterol disorders
- Congenital adrenal hyperplasia
- Cushing syndrome
- Delayed, absent or early puberty

- Diabetes insipidus
- Disorders of the anterior pituitary gland
- Disorders of sex development
- Growth disorders
- Gynecomastia in males
- Hirsutism in females
- Hypoglycemia
- Prader-Willi syndrome
- Prolactin disorders

- Rickets
- Short stature
- Syndrome of inappropriate antidiuretic hormone (SIADH)
- Thyroid nodules
- Thyroid disorders, including hyperthyroidism and hypothyroidism
- Turner syndrome
- Type 1 diabetes mellitus
- Type 2 diabetes mellitus

### **Urgent referrals**

If you feel your patient needs to be seen as soon as possible, note "urgent" on your referral. All referrals marked "urgent" are triaged to help make sure patients are seen in a timely fashion. If you wish to speak to the on-call endocrinologist, call 404-785-DOCS (3627). Generally, conditions that may warrant an urgent initial outpatient visit include, but are not limited to:

- New Type 1 or 2 diabetes.
- Congenital hypothyroidism (neonate).
- Goiter or palpable nodule, if clinical findings include asymmetric gland, increasing size or discomfort, abnormal thyroid biopsy.
- Abnormal height velocity or crossing percentiles **and** associated with severe headaches and/or blurry vision.
- Hypoglycemia and failure to thrive.

### **Routine referrals**

There are several conditions we see that may not warrant an urgent evaluation given the available resources. These may include, but are not limited to, the following:

- Short stature (current height less than 3<sup>rd</sup> percentile for age or crossing percentiles on repeated growth measurements).
- Precocious puberty >7 years of age.
- Delayed puberty.

- Non-palpable nodule on thyroid (seen on ultrasound).
- Possible hypothyroidism with TSH <20 uIU/ml
- Congenital hypothyroidism (already on treatment).

### Referral checklist and guidelines for common diagnoses

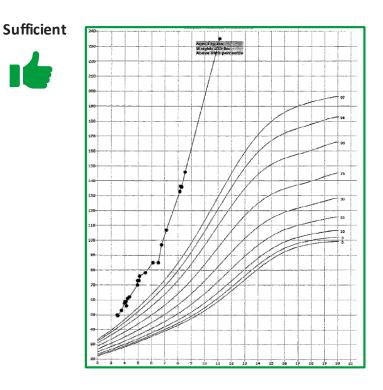

When referring a patient for any reason, you must include office notes and growth curves. Otherwise, we will <u>not</u> be able to schedule your patient. In the table below, we have listed the labs and/or documents we require for the most common referrals. If the suspected diagnosis is <u>not</u> listed below, you only need to include office notes, labs that have <u>already</u> been ordered and visual growth curves with plotted points (multiple points are preferred, if applicable).

Suspected diagnosis	Labs/documents required before scheduling	Criteria for referral	Steps to take if criteria are not met, but concern for condition still exists
Abnormal thyroid function	<ul> <li>Office notes</li> <li>Growth curves</li> <li>Thyroid function tests</li> </ul>	<ul> <li>Goiter present</li> <li>TSH &gt; 9 uIU/mL</li> <li>Free T<sub>4</sub> &lt; 0.8 ng/dL and/or total T<sub>4</sub> &lt; 5 mcg/dL</li> </ul>	If initial (TSH) is elevated, but < 8.9 uIU/mL, repeat labs in one month with TSH, free T <sub>4</sub> , thyroid peroxidase autoantibody (TPO) and antithyroglobulin autoantibodies (ATG). Document thyroid exam.
			If there is no goiter and BMI >85%, TSH remains minimally elevated and autoantibodies are negative, TSH should return to normal after weight loss is achieved. No further testing required
			<ul> <li>Guidelines for positive autoantibodies and normal thyroid function:</li> <li>Assess thyroid function every 6 – 12 months.</li> <li>Refer your patient if results: <ul> <li>TSH between 4-8.9 mIU/L and</li> <li>Free T<sub>4</sub> &lt; 0.8 ng/dL or total T4 &lt; 5 mcg/dL</li> <li>Abnormal thyroid exam</li> </ul> </li> </ul>
Diabetes, obesity, metabolic syndrome	<ul> <li>Office notes</li> <li>Growth curves</li> <li>A1c</li> <li>If a patient has an established diabetes diagnosis, send all available records with focus on initial lab eval.</li> </ul>	Due to the large volume of referrals of this nature, we redirect patients with an A1c <6.5% to Strong4Life, regardless of acanthosis or hyperinsulinemia	For possible Type 2 Diabetes, two abnormal values are required to diagnose diabetes in the absence of symptoms. Values include: □ Fasting glucose >126 mg/dl or □ 2-hr post-prandial glucose >200 mg/dl or □ A1c >6.5%
Hypoglycemia/syncope	<ul> <li>Office notes</li> <li>Growth curves</li> <li>Glucose</li> </ul>	<ul> <li>Documented serum glucose &lt; 60 mg/dl</li> </ul>	Consider another specialty referral based on symptoms
Hyperlipidemia	<ul> <li>Office notes</li> <li>Growth curves</li> <li>Fasting lipid panel</li> </ul>	<ul> <li>LDL ≥190 mg/dL</li> <li>HDL &lt; 20 mg/dl</li> <li>Triglycerides &gt; 300 mg/dl</li> <li>Moderate LDL elevation (130-189 mg/dL), no response to lifestyle management after 6 months and known risk factors</li> </ul>	For moderate LDL elevation (130-189 mg/dL), lifestyle management is recommended for 6 months before referring to endocrinology. Abnormal triglyceride levels that are <300 mg/dL may respond to lifestyle management plus-or-minus fish oil.
Short stature and poor weight gain	<ul> <li>Office notes</li> <li>Growth curves</li> </ul>	<ul> <li>Poor weight gain and</li> <li>Abnormal growth velocity</li> </ul>	If growth velocity is well maintained but weight gain appears to be lacking growth hormone deficiency is unlikely. We recommend a referral to GI.

Suspected diagnosis	Labs/documents required before scheduling	Criteria for referral	Steps to take if criteria are not met, but concern for condition still exists
Short stature in adolescents	<ul> <li>□ Office notes</li> <li>□ Growth curves</li> <li>□ Bone age</li> </ul>	<ul> <li>Bone age for female read &lt; 15 years of age</li> <li>Bone age for male read at &lt; 16 years of age</li> <li>&lt; 2 years post menarche</li> </ul>	99% of final adult height achieved when bone age is > 15 years in females and > 16 years in males. No intervention available to enhance final adult height.
			Two years post menarche, final adult height is achieved.
Vitamin D deficiency	<ul> <li>Office notes</li> <li>Growth curves</li> <li>25 OH Vitamin D</li> </ul>	<ul> <li>Physical exam consistent with nutritional rickets</li> <li>Radiographic evidence of rickets</li> <li>Alkaline phosphatase above age normal limits</li> </ul>	Begin Vitamin D supplementation based on American Academy of Pediatrics guidelines

### **Growth curves**

We require growth curves for <u>all</u> referred patients prior to scheduling. Note, it is very important to provide a **visual line graph**, ideally for both height and weight, although both are not required. Multiple points are preferred, *if available*. If you have only seen the patient once, we will accept graphs with single points.

### **Office notes**

Office notes are crucial in helping us determine the intricacies of your patient's case. Note, we require office notes *beyond* just the reason for referral. Whether you refer to them as Clinical Notes, History of Present Illness (HPI), Interval History or Notes, what we need are notes that the provider took during the last visit that explain the child's case and chief concern. A short "reason for referral" is **not** sufficient. See examples below.

### Insufficient

<u>Referral</u>

Date requested: 08/16/2021 Requested by: FirstName LastName, NP Referral to: pediatric endocrinology Summary of care provided: Reason for referral/notes: breast buds and pubic hair ICD code: Precocious puberty (ICD-10: E30.1)

### Sufficient

ent	Diagnosis	Congenital hypothyroidism
_		ICD-10: E03.1: Congenital hypothyroidism without goiter
F	Order	Orders included: 1
	Name	<ul> <li>Congenital hypothyroidism</li> <li>ICD-10: E03.1: Congenital hypothyroidism without goiter</li> <li>PEDIATRIC ENDOCRINOLOGIST REFERRAL</li> <li>Schedule within provider's discretion</li> </ul>
	Notes	6 mo. male, former 30-week premature delivery – with congenital hypothyroidism, h/o elevated TSH x3 on newborn screenings. Presented for primary visit on [date], repeat TSH elevated to 5.4, normal free T4. Telephone consult with Dr. LastName. Advised to refer to pediatric endo at 6 mo. of age. Please evaluate and assist.

# Pediatric endocrinology and obesity

# A physician's quick guide to helping children with obesity

At Children's Physician Group–Endocrinology and Strong4Life, our goals are to diagnose pathological causes of obesity and manage endocrine complications of obesity. This document provides a synopsis of endocrine problems that commonly arise in general pediatric management of obesity.

### **Etiology of obesity**

Short stature or slow growth velocity in a growing obese child is a red flag for a pathological cause. Obesity onset before age 5 is typical in children with a monogenic cause of obesity. However, only 5% of children with early onset obesity have a known genetic case.

### **Common conditions**

### Cushing syndrome

This can be difficult to diagnose. Look for features beyond obesity and striae, including short stature, hypertension, proximal limb muscle wasting or weakness, and diabetes. The overnight dexamethasone suppression test is used to evaluate the risk of Cushing syndrome.

- One dose of 15 mcg/kg (max 1 mg) dex po at 11 p.m., and check cortisol the following morning between 7 a.m. and 9 a.m.
- Cortisol should be <2.0 mcg/dL.

### Diabetes

- Screen for diabetes every three years in asymptomatic, obese children ages 10 to 19 years old with a family history of Type 2 diabetes, high-risk race or signs of insulin resistance. There is no agreed upon best test (fasting glucose, random glucose, HbA1c).
- Insulin levels do not effectively predict future Type 2 diabetes.
- Apart from lifestyle management, there is no approved therapy for children with prediabetes. Patients with prediabetes that persists after a serious effort to manage lifestyle for greater than six months may benefit from metformin treatment or an endocrine consult.

• A diabetes education consultation or a referral to Strong4Life can be arranged through Children's Healthcare of Atlanta for children with prediabetes.

### High LDL cholesterol

- Ensure a fasting sample was obtained.
- Take an average of two samples drawn two to 12 weeks apart when patient is not acutely ill.
- Check for primary disease-causing high LDL cholesterol (i.e., fasting CMP, TSH and urinalysis).
- For moderate elevation (130-189 mg/dL), lifestyle management is recommended for all patients. If no response within six months, evaluate for the following risk factors:
  - Hypertension
  - Smoking
  - Diabetes
  - Nephrotic syndrome
  - Renal failure
  - Renal transplant
  - History of Kawasaki disease
  - HIV
  - Chronic inflammation
  - Cancer survivor
  - Family history of premature cardiovascular disease
- If a high-risk factor is present, the child may benefit from lipid clinic consult.
- If LDL ≥190 mg/dL, a referral to the lipid clinic is recommended irrespective of risk factors present.

### igh fasting triglycerides

gh triglycerides with low HDL cholesterol is common in bese children. Children with severely low HDL (<20 mg/dL) ay benefit from a lipid clinic consult.

Ensure fasting sample was obtained.

Take an average of two samples drawn two to 12 weeks apart when patient is not acutely ill.

Check for primary disease-causing high triglyceride (i.e., fasting CMP, TSH and urinalysis).

Abnormal levels that are <300 mg/dL may respond to lifestyle management plus or minus fish oil.

Levels >300 mg/dL may benefit from a lipid clinic consult.

### olycystic ovarian syndrome (PCOS)

ormal variations in adolescents can make a PCOS diagnosis fficult using standard criteria. Minimum requirements for agnosis include:

Irregular or absent ovulation

Clinical signs of high androgens (e.g., hirsute and severe acne)

fferential diagnosis of adrenal disease or an ovarian tumor n be evaluated with minimal investigation.

17-hydroxyprogesterone

Free testosterone

DHEA-S

TSH

Fasting complete metabolic profile

Fasting lipid profile

hCG (urine or serum)

± 25 (OH) vitamin D

combined oral contraceptive pill (OCP) is the first line of erapy. Use OCP with low androgen activity. Consider the risk r thrombosis before starting oral contraceptive. Metformin used by some, but it is not a Food and Drug Administration DA)-approved indication.

### **Evaluating complications of obesity**

### Thyroid function testing

- If initial thyroid-stimulating hormone (TSH) is high but
   <9 uIU/mL, palpate thyroid gland and repeat TSH and</li>
   Free T4. Get thyroid peroxidase autoantibody (TPO) and antithyroglobulin autoantibodies.
- If there is no goiter, TSH remains minimally elevated and autoantibodies are both negative, TSH should return to normal after weight loss is achieved.
- If there is a goiter present, TSH rises above 9 uIU/mL or either autoantibody is positive, a referral to endocrinology is indicated.

### **Contact us**

Ca

Call 404-785-DOCS (5437) to make a referral or for a physician-to-physician consult.

Visit choa.org/md for more information and to access our online referral form.

# Children's Physician Group– Gynecology

# Guidelines for referrals

Below is a list of guidelines to follow when referring a patient for a consultation to Children's Physician Group–Gynecology. These are meant to be general recommendations. If you have specific questions, call **404-785-DOCS (3627)** and ask to speak with the on-call gynecologist.

### **Common conditions treated**

- Abnormal uterine bleeding
- Adnexal masses (ovarian/paraovarian cysts)
- Amenorrhea
- Complex contraception (pregnancy prevention in medically complex patients)
- Congenital adrenal hyperplasia
- Delayed puberty
- Disorders of sex development
- Dysmenorrhea
- Endometriosis
- Hormone replacement therapy
- Menstrual suppression for special needs
- Mullerian (uterine) anomalies
- Pelvic inflammatory disease

- Precocious puberty
- Premature ovarian insufficiency
- Polycystic ovarian syndrome
- Urethral prolapse
- Vaginal anomalies
- Vulvar vaginal issues
  - Vaginal discharge
  - o Prepubertal vulvovaginitis
  - o Labial/vulvar masses and ulcers
  - Lichen sclerosus
  - Labial adhesions
  - Labial hypertrophy
  - o Genital tract trauma

For patients with the conditions listed below, we recommend a referral to our Adolescent Medicine Clinic, located at Hughes Spalding Hospital (phone: 404-785-9850), or an external gynecology provider.

- New patients >16 years: irregular periods, vulvovaginitis, contraceptive counseling, dysmenorrhea
- Return patients >16 years: controlled symptoms and no complex medical issues

### **Urgent referrals**

Most issues we see do not warrant an urgent referral. However, if you feel your patient needs to be seen as soon as possible, note "urgent" on your referral. All referrals marked "urgent" are triaged to help make sure patients are seen in a timely fashion. If you wish to speak to the on-call pediatric gynecologist, call 404-785-9635. Generally, conditions that may warrant an urgent initial outpatient visit include, but are not limited to:

- Ovarian, pelvic, adnexal masses
- Acute genital tract trauma

- Differences of sexual development
- Vaginal/menstrual outflow tract obstruction

### **Routine referrals**

The majority of conditions we see may not warrant an urgent evaluation given the available resources. These may include, but are not limited to, the following:

- Heavy menses
- Irregular or abnormal menstrual bleeding
- Painful menses (dysmenorrhea, endometriosis, pelvic pain NOS)
- Vaginal discharge or pain
- Precocious puberty
- Delayed puberty
- PCOS

### Referral checklist and guidelines for common diagnoses

When referring a patient, you must include office notes. Otherwise, we will <u>not</u> be able to schedule your patient. In the table below, we have listed the labs and/or documents we require for the most common referrals. If the suspected diagnosis is <u>not</u> listed below, you only need to include office notes and labs that have <u>already</u> been ordered.

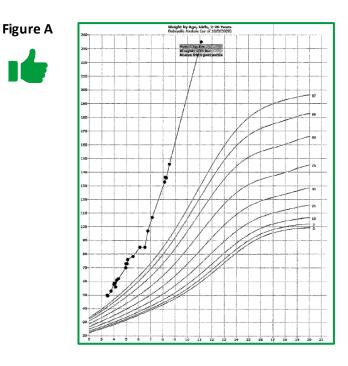

Suspected diagnosis	Labs/documents required before scheduling	Criteria for referral	Suggested work-up	Possible initial management
Heavy menses	<ul> <li>Office notes</li> <li>Lab results if ordered</li> </ul>	Bleeding >7days, >7 pads per day, menses resulting in anemia	<ul> <li>CBC</li> <li>Von Willebrand panel</li> <li>Fibrinogen</li> <li>TSH</li> <li>Iron studies</li> </ul>	***Aygestin; combined oral contraceptive pill (OCP); consider the risk for thrombosis before starting OCP*
Precocious puberty	<ul> <li>Office notes</li> <li>Growth curve</li> <li>Lab results if</li> <li>ordered</li> </ul>	Breast, genital hair, vaginal bleeding prior to age 8	<ul> <li>LH</li> <li>FSH</li> <li>Estradiol</li> <li>TSH</li> <li>Prolactin</li> </ul>	
Delayed puberty	<ul> <li>Office notes</li> <li>Growth curve</li> <li>Lab results if</li> <li>ordered</li> </ul>	No pubertal development by age 13	<ul> <li>LH</li> <li>FSH</li> <li>Estradiol</li> <li>TSH</li> <li>Prolactin</li> </ul>	
Primary amenorrhea	<ul> <li>Office notes</li> <li>Growth curve</li> <li>Lab results if</li> <li>ordered</li> </ul>	No menses by age 15 or 3 years after menarche	See irregular menses workup	
Irregular menses, oligomenorrhea, Polycystic Ovarian Syndrome (PCOS)	<ul> <li>Office notes</li> <li>Growth curve</li> <li>Lab results if ordered</li> </ul>	Irregular or absent bleeding Do labs if any androgenizing symptoms (acne, hirsutism)	<ul> <li>LH</li> <li>FSH</li> <li>Estradiol</li> <li>17-hydroxy- progesterone</li> <li>Free testosterone</li> <li>DHEA-S</li> <li>TSH</li> <li>Fasting complete metabolic profile</li> <li>Fasting lipid profile</li> <li>hCG (urine or serum)</li> <li>Prolactin</li> </ul>	OCP is the first line of therapy; consider the risk for thrombosis before starting OCP* Metformin is used by some, but it is not an FDA-approved indication
Pelvic mass	<ul> <li>Office notes</li> <li>Imaging report*</li> </ul>	We must have imaging report prior to scheduling appointment	<ul> <li>Patient to bring disc with images</li> </ul>	
Dysmenorrhea	□ Office notes □ Imaging if done			Ibuprofen 600mg TID; heating pads, warm bath, physical activity
Complex contraception	<ul> <li>Office notes</li> <li>Lab results if</li> <li>ordered</li> </ul>	Patient has underlying medical problem that would prohibit adolescent medicine or general GYN from providing care	<ul> <li>Gonorrhea</li> <li>Chlamydia</li> <li>Trichomonas</li> <li>+/-RPR and HIV</li> </ul>	

\*AUB labs should be drawn **before** starting hormone therapy, if indicated.

- \*\*\*Initial therapy in patient with heavy menstrual bleeding that is actively bleeding
  - Taper if hgb 8-11.9 and actively bleeding:
    - Aygestin 10mg BID x3 days until 3 days after bleeding stops then continue 10mg daily OR
    - o Orthocyclen 1 tab q8 hours x3 days, then BID x2 days, then daily
  - Maintenance if hgb >11.9 or not actively bleeding:
    - Aygestin 10mg daily <u>OR</u>
    - o Orthocyclen 1 tab daily (may skip placebo week)
  - Send to Emergency Department for active bleeding (not spotting) and hgb <8

### **Growth curves**

We require growth curves for <u>all</u> referred patients prior to scheduling. Note, it is very important to provide a **visual line graph**, ideally for both height and weight, although both are not required. Multiple points are preferred, *if available*. If you have only seen the patient once, we will accept graphs with single points.

Menarche 11/20. Cycles have been very heavy with clots, uses 5-6 pads/day. Cycles last 2-4 weeks Asthma -mild persistent. On Ventolin HFA prn and Flovent daily. Needs refills

# Aflac Cancer and Blood Disorders Center

# **Referral Guidelines**

Below is a list of guidelines to follow when referring a patient for a consultation with the hematology/oncology practice at the Aflac Cancer and Blood Disorders Center. These are meant to be general recommendations. If you have specific questions, call **404-785-DOCS (3627)** and ask to speak with the on-call hematologist or oncologist. If you have a question regarding a patient needing urgent care, call **404-785-7778** to connect directly with the Children's Transfer Center.

### Common conditions treated

- Abnormal bleeding
- Thrombosis (excessive clotting)
- White blood cell problems (neutropenia, leukocytosis)
- Anemia
- Erythrocytosis
- Thrombocytosis
   (platelet counts >500,000)
- Thalassemia major/Hb H disease
- ITP/low platelets
- Sickle cell disease
- Immunohematology
- Lymphadenopathy
- Leukemia/lymphoma
- Solid tumor
- Brain tumor

- Histiocytosis
- Cancer predisposition (genetics/genetic counseling)
- Survivorship (>2 years off therapy)
- Bone marrow transplant

### Urgent referrals

If you feel your patient needs to be seen as soon as possible, note "urgent" on your referral. All referrals marked "urgent" are triaged to help make sure patients are seen in a timely fashion. If you wish to speak to the on-call hematologist/oncologist, call **404-785-DOCS (3627)**. If you have an urgent referral for one of the below concerns, please call **404-785-7778** to connect with the Children's Transfer Center directly.

- Significant concern for new oncologic diagnosis
- ITP with platelet counts <20K
- Severe neutropenia with fever (ANC <200)

- Severe anemia (hemoglobin <6)</li>
- Concern for new blood clot

### Routine referrals

All referrals are reviewed by our physicians for clinical appropriateness and may be deemed routine given the available resources. There are some conditions that do not need a referral to hematology/oncology at Children's. These may include, but are not limited to, the following:

- Elevated lead levels (see current CDC guidelines)
- Henoch-Schonlein Purpura (HSP), a non-hematologic disorder
- Mild or moderate iron deficiency anemia without a trial of iron (Hgb >8, iron trial x1 month)
- Thrombocytosis with platelet counts <500,000
- Any patient currently pregnant
- Any patient 18 and older with a new hematologic diagnosis with no existing relationship with the Aflac Cancer and Blood Disorders Center
- Any patient 21 and older with a new cancer diagnosis with no existing relationship with the Aflac Cancer and Blood Disorders Center (exceptions made for available clinical trials)

**Note**: All referrals to the Vascular Anomalies Clinic should be directed to vac@choa.org.

### **Referral checklist**

All referrals are reviewed by a physician for clinical appropriateness. If appropriate, they are assigned to a team and scheduled based on the information provided. When referring a patient for any reason, you must include all patient demographics, clinical notes, as well as labs and/or scans that may have been completed. Otherwise, we will <u>not</u> be able to schedule your patient.

Other recommendations to help ensure your referral can be addressed in a timely manner:

- Be specific about what the referral is for and include a possible diagnosis (i.e., anemia, low WBC count).
- If you are referring for an abnormal newborn screen, include a copy of the newborn screen and any other associated workup or treatment notes.
- Provide a phone number and direct extension (if applicable) for the referring provider or someone within the practice who can answer questions about the referral.

# Children's Physician Group– Nephrology

### Guidelines for referrals

Below is a list of guidance to follow when referring a patient for a consultation to Children's Physician Group–Nephrology, including our Hypertension Clinic. These are meant to be general recommendations. If you have specific questions, call **404-785-DOCS (3627)** and ask to speak with the on-call nephrologist. You will almost always be speaking directly with an attending nephrologist.

### **Conditions treated**

- Congenital kidney problems
- Kidney failure
- Kidney stones
- Nephrotic syndrome
- ProteinuriaCystic kidney disease
- Glomerulonephritis
- Hematuria
- Hemolytic uremic syndrome
- Hypertension
- Enuresis
  - Electrolyte abnormalities
- Urinary tract infections

### Urgent referrals

If you feel your patient needs to be seen immediately, call **404-785-DOCS (3627)**. Some of these patients may warrant an Emergency Department evaluation or hospitalization. Generally, conditions that may warrant an Emergency Department evaluation, hospitalization or an urgent initial outpatient visit include, but are not limited to:

- **Nephrotic syndrome**: Urgent clinic if normal renal function and absence of severe edema; else, Emergency Department
- Severe hypertension
  - o Stage 2 hypertension: Urgent clinic
  - $\circ~$  Symptomatic hypertension or BP > 30 mm Hg above the 95% (>160/100 in adolescent): Discuss with nephrologist
- Acute kidney injury: Emergency Department
- Acute glomerulonephritis: Discuss with nephrologist
- HSP with significant proteinuria: Urgent clinic visit if renal function is normal; else, discuss with nephrologist; obtain random or first AM (preferred) urine protein/creatinine ratio, renal function panel\* and microscopic urinalysis
- Proteinuria with decreased kidney function: Discuss with nephrologist
- **Gross hematuria**: Discuss with nephrologist if findings of glomerulonephritis (elevated BP, elevated creatinine or hypoalbuminemia); consider these labs if suspect glomerulonephritis: renal function panel\*, urine protein/creatinine ratio C3, C4 and ANA; consider urine culture if fever, dysuria, frequency; consider ultrasound if significant pain, may need urgent evaluation (urology or Emergency Department)

### Lab tests and ultrasound results that do not need a referral

- Elevated BUN/creatinine ratio: Normally elevated in young children due to low creatinine levels
- Elevated BUN and normal creatinine: Mildly elevated BUN is rarely concerning if the creatinine is normal

- Elevated urine protein if urine protein/creatinine ratio is normal (< 0.2 mg/mg or <200 mg/g)
- Isolated urine crystals, unless cystine or 2,8-dihydroxyadenine crystals
- Kidney length asymmetry if both kidneys are normal in length
- Duplicated collecting system is a normal variant unless associated with hydronephrosis, urine leaking due to ectopic ureter or dysplasia

### Conditions that should be referred to other specialists

- Hydronephrosis  $\rightarrow$  urology
- Symptomatic kidney stone that requires acute management
- Terminal (end-of-stream) visible hematuria  $\rightarrow$  urology

### Conditions where most referrals can be avoided with basic testing in your office

- **Microscopic hematuria**: Only refer if red blood cells are confirmed by microscopy on at least 2 to 3 occasions; consider kidney ultrasound prior to referral if hematuria is persistent.
- **Proteinuria**: Only refer after screening for benign orthostatic proteinuria by performing a first AM urine protein/creatinine ratio and demonstrating an elevated value (> 0.2 mg/mg or >200 mg/g). If non-orthostatic proteinuria, consider renal function panel\*, cholesterol, C3, C4 and ANA prior to referral.
- **Hypertension**: Confirm by obtaining auscultatory values using an appropriately sized cuff. Many overweight or muscular teenagers need a large adult cuff. For stage 1 hypertension, confirm 1 to 2 weeks before referring. Please refer patients with hypertension without associated significant kidney disease to our Nephrology Hypertension Clinic that has ambulatory blood pressure monitoring (ABPM) and nutritional support for patients.

### Locations

Our main clinic is at the Center for Advanced Pediatrics with additional outreach clinics throughout metro Atlanta.

- Center for Advanced Pediatrics: 2174 North Druid Hills Road NE, Atlanta, GA 30329
- Children's at Northpoint: 3795 Mansell Road, Alpharetta, GA 30022
- Children's at Satellite Boulevard: 2660 Satellite Boulevard, Duluth, GA 30096
- Children's at Town Center Outpatient Care Center: 605 Big Shanty Road, Kennesaw, GA 30144

Tell your patient families to ask to be seen in the clinic that is most convenient for them. Note: Outreach clinics may not be able to accommodate urgent appointments since some are only held monthly or bi-monthly.

### **Referrals and medical records**

- Fax: Fax referral requests to 404-785-9111.
- Online: Complete our online referral form at choa.org/referral.
- accessCHOA: Send referrals through accessCHOA.

Make sure all appropriate records are faxed to our office prior to the patient's visit. This includes the office visit notes, imaging studies (i.e. kidney ultrasound) and lab results. If lab results are pending at the time the records are faxed, send the complete results when available.

Note: In case of an urgent concern or emergency, call 911 or advise the family to go the nearest emergency department right away.

\*Renal function panel includes electrolytes, BUN, creatinine, albumin and phosphorus. CMP is an alternative, but it does not include phosphorus.

# Neurology

# **Guidelines for Referrals**

Below is a list of guidelines to follow when referring a patient for a consultation to Children's Healthcare of Atlanta Neurology. These are meant to be general recommendations. If you have specific questions, call **404-785-DOCS** (3627), and ask to speak with the on-call neurologist.

### **Office Notes**

We require office notes beyond just the reason for referral. Office notes are crucial in helping us determine the intricacies of your patient's case. Whether you refer to them as Clinical Notes, History of Present Illness (HPI), Interval History or Notes, what we need are notes that the provider took during the last visit that explain the child's case and chief concern for referral. A short "reason for referral" is not sufficient. See examples below.

Insufficient	Referral Date requested: 08/16/2021 Requested by: First Name Last Nar Referral to: Pediatric Neurology Summary of care provided by: Reason for referral/notes: Seizure					
	(ICD-10: G40.909)					
	**** 055500410					
		MUST INCLUDE COMPLETE OFFICE NOTES				
	Sufficient       Patient Name is a XX-year-old female presents with mom c/o having a seizure lasted for two minutes. She states she was unconscious for 20 minutes. Per m second time having seizures. She was not sick or having any fever. Mom was or patient not eating well.         Neurological Symptoms: Seizures					
	Diagnosis:	Seizure Disorder, Epilepsy, unspecified, not intractable, without status epilepticus ICD-10: G40.909				
	Order Name:	Orders included: 1				
		Seizure Disorder				
		<ul> <li>ICD-10: G40.909. Seizure Disorder, Epilepsy, unspecified, not intractable, without status epilepticus</li> <li>PEDIATRIC NEUROLOGIST REFERRAL Schedule within: provider's discretion</li> </ul>				

### **Excluded Services**

Patients that meet the criteria below will be referred back to their primary care physician for management. Additional criteria must be met before patients will be seen by Children's Healthcare of Atlanta Neurology.

Suspected Diagnosis	Criteria
Simple febrile seizures	<ul> <li>Between 6 months and 5 years old</li> <li>Fever</li> <li>No focal features</li> <li>Less than 15 minutes</li> <li>1 in 24 hour period</li> <li>*Note: Age of first simple febrile seizure does change criteria</li> </ul>
Simple headaches	<ul> <li>Infrequent primary headache disorder (ex: migraine with or without aura or tension type) that responds to an abortive (OTC or triptan) and/or a first line preventative and lifestyle changes</li> </ul>
	<ul> <li>Recurrent headaches for less than 6 months without red flags unless meets criteria for chronic headache (15 days or more for over 3 months)</li> <li>Referrals from the ED (can make exceptions for documented chronicity) Suggestion: return to PCP for care and to determine if Neurology referral is needed</li> </ul>
	<ul> <li>Acute onset headache (ex: associated with acute viral illness)</li> </ul>
Syncope	<ul> <li>Fainting in a standing position, than when sitting or lying</li> <li>Turning pale</li> <li>Vision went dark</li> <li>Low blood pressure</li> </ul>
	<ul> <li>Dizziness, lightheadedness, palpitations, fainting up on standing or moving to an upright position</li> <li>If applicable, rule out syncope vs seizure with referral to cardiology first</li> <li>*If possible, obtain vitals when symptomatic (heart rate, blood pressure, etc.)</li> </ul>
Tics (less than 6 months)	<ul> <li>Simple motor (i.e. blinking) and/or vocal tics (i.e. throat clearing, sniffing)         <ul> <li>Onset of tics between ages 4-11*</li> <li>Not causing pain or interfering with activities OR have not tried one first-line tic medication (i.e. guanfacine or clonidine)</li> <li>Normal neurological exam</li> <li>No neurologic comorbidities</li> </ul> </li> </ul>

### **Conditions Treated**

- Acute disseminated encephalomyelitis
- Anti-NMDA receptor encephalitis
- Cerebral palsy
- Complex autism spectrum disorder with a neurological component
- Concussion
- Epilepsy and seizure disorders
- Headaches and migraines

- Infantile spasms
- Leukodystrophy
- Movement disorders
- Multiple sclerosis
- Myasthenia gravis
- Myopathies
- Neurodevelopmental Disorders
- Neurometabolic and neurogenetic disorders
- Neuromyelitis optica

- Neuropathy
- Psychogenic non epileptic events (PNEE)
- Rett syndrome
- Spasticity
- Spells
- Spinal Muscular Atrophy
- Stroke
- Transverse myelitis
- Traumatic brain injury

2

### **Referral Checklist and Guidelines**

In the table below, we have listed the labs and/or documents we require, and the criteria needed for the most common referrals. If these guidelines are not met, we have outlined steps to take if the condition still exists. If the suspected diagnosis is not listed below, you only need to include office notes.

Suspected Diagnosis	Lab documents to send as part of referral	Criteria for referral
Cerebral palsy	<ul> <li>Office notes, documentation of birth history and previous neuroimaging, preferred</li> </ul>	<ul> <li>Known CP with co-morbid neurological disorders (e.g. epilepsy)</li> <li>Known CP without a current CP provider (not already seeing Physiatry)</li> <li>Suspected CP:         <ul> <li>Prematurity AND motor delay or problems with posture or muscle tone (hypertonia <i>or</i> hypotonia)</li> <li>History of brain injury or abnormal brain development AND motor delay or problems with posture or muscle tone (hypertonia or hypotonia)</li> <li>Motor delay AND exaggerated reflexes</li> <li>Motor delay AND hypertonia (stiffness, spasticity)</li> </ul> </li> <li>Spasticity:         <ul> <li>Increased muscle tone</li> <li>Involuntary movements which may cause spasms and contractures</li> <li>Exaggerated reflexes</li> <li>Contractures</li> </ul> </li> </ul>
Complex autism spectrum disorder with a neurological component Concussion	<ul> <li>Developmental assessments</li> <li>Other referrals</li> <li>MRI</li> <li>Genetics</li> <li>EEG results</li> <li>Description of medical or neurological complexity</li> <li>Current disabilities</li> <li>Documented when injury occurred</li> </ul>	<ul> <li>Altered posture</li> <li>Known primary neurologic or genetic disorder with documented evidence</li> <li>Description of reason that psychological evaluation at Marcus would not be sufficient (do not include wait list issues)</li> <li>Documented visit with general or specialty neurology appointment with findings substantiating complexity</li> <li>History of post-traumatic seizures</li> <li>Headache &gt; 4wks</li> </ul>
Epilepsy and seizure disorders	<ul> <li>Ongoing past concussion symptoms</li> <li>Office notes</li> <li>EEG</li> <li>Imaging results</li> </ul>	<ul> <li>Injury &lt; 6 months ago</li> <li>Persistent cognitive or neuroligcal symptoms</li> <li>Two or more unprovoked seizures with or without abnormal EEG</li> <li>OR</li> <li>Known diagnosis of epilepsy/second opinion</li> </ul>

Headaches and migraines	<ul> <li>Office notes (including documentation that patient meets criteria)</li> <li>Imaging results</li> </ul>	<ul> <li>Recurrent headache for &gt;6 months, not responding to abortive treatment and lifestyle modifications</li> <li>Headaches with other associated red flags or focal neurological deficits</li> <li>Headache that is resulting in missed school days or worsening school performance (including declining grades or decreased participation in extracurricular activities</li> <li>Chronic headache criteria: Headache greater than 15 days in a month for over 3 months</li> </ul>
Low muscle tone / hypotonia	Office notes	Low muscle tone affecting development
Movement disorders	<ul><li>Office notes</li><li>Lab results</li><li>MRI results</li></ul>	<ul> <li>Abnormal involuntary movements with retained awareness (i.e. chorea, ataxia, dystonia)</li> </ul>
Neurodevelopmental Disorders	<ul> <li>OT, SLP or PT notes</li> <li>Labs results</li> <li>Imaging results</li> </ul>	<ul> <li>Office notes pertaining to the developmental delay in question</li> <li>Developmental screening results from within the last 3 months</li> <li>Concern for not meeting developmental milestones</li> <li>Evidence that idiopathic autism spectrum disorder is not and should not be the primary concern</li> </ul>
Neuropathy	Office notes	<ul> <li>Numbness, tingling, burning sensation</li> <li>Increased sensation to touch</li> <li>Muscle weakness</li> <li>Pain</li> <li>Family history or inherited neuropathies</li> </ul>
Rett syndrome	<ul> <li>Office notes</li> <li>Lab results</li> <li>Genetic testing (if already preformed)</li> <li>Any imaging (MRI, EEG, CT)</li> <li>Release of information from previous/current facilities</li> </ul>	<ul> <li>Slowed growth</li> <li>Developmental delays (loss of coordination and movement)</li> <li>Unusual hand movements</li> <li>Seizures</li> <li>Sleep disturbances and irritability</li> <li>Genetic testing</li> <li>CT/MRI/EEG</li> </ul>

Spells and Seizure- like Activity	<ul> <li>Office notes</li> <li>EEG results</li> <li>ED notes if applicable</li> <li>Screening measures if applicable</li> <li>Family recorded video of event(s) if applicable</li> </ul>	<ul> <li>If applicable, rule out syncope vs seizure with referral to cardiology first</li> <li>Screening for depression, anxiety, suicidal or homicidal ideation</li> <li>Episodes of full body convulsions, staring spells, or jerking on one side of the body</li> <li>Counsel family to record video for events to have</li> </ul>
		available for appointment
Tics (>6 months)	<ul> <li>Office notes</li> <li>Lab results</li> </ul>	<ul> <li>Complex motor (jumping, hitting, copropraxia) +/- complex vocal tics (coprolalia, words/phrases)</li> <li>Onset of tics after age 11, or under age 4*</li> <li>Simple tics which have failed one first-line medication</li> <li>Abnormal neurological exam or neurologic comorbidities (i.e. autism, cerebral palsy)</li> <li>Eye fluttering</li> <li>Concern for seizures</li> <li>Routine/first available appointment:         <ul> <li>Brief episodes</li> <li>No altered mental status</li> </ul> </li> </ul>

### **Urgent referrals**

If you feel your patient needs to be seen as soon as possible, note "urgent" on your referral. All referrals marked "urgent" are triaged to help make sure patients are seen in a timely fashion. If you wish to speak to the on-call neurologist, call 404-785-DOCS (3627).

### Referrals for Judson L. Hawk Jr., M.D., Clinic for Children

The Judson Hawk center consists of a multidisciplinary team of doctors who see patients with a wide range of medical conditions. This center is different than the Children's Healthcare of Atlanta Outpatient Neurology department and therefore has a different referral review process. If your child requires treatment for one of the following conditions listed below, please have your referring provider send to (404) 785-9111.

- Charcot-Marie-Tooth
- Facioscapulohumeral muscular dystrophy
- Muscular dystrophy

- Neurocutaneous syndrome
- Neurofibromatosis
- Tuberous sclerosis complex

# **Children's Healthcare of Atlanta Neuropsychology**

## Guidelines for referrals

Below is a list of guidelines to follow when referring a patient to Children's Healthcare of Atlanta Neuropsychology for a consultation or testing. These are meant to be general guidelines. If you have specific questions, call the Neuropsychology provider line at **404-785-2849**, **option 4**.

### Which patients should you refer?

Due to the specialized nature of our practice, we only see patients with a primary neurological diagnosis. While some of these patients might have secondary psychiatric or behavioral diagnoses\*, we can only see them if they have a primary neurological diagnosis from a medical doctor.

### **Common conditions treated**

- Abnormal electroencephalogram (EEG)
- Abnormal MRI of brain
- Anoxic or hypoxic brain injury/encephalopathy
- Arteriovenous malformations
- Brain or neurological injury (not listed elsewhere)
- Brain tumor
- Cardiac condition (congenital heart disease, heart failure, heart transplant)
- Cerebral palsy
- Chiari malformation
- Concussion
- Congenital brain abnormality (not listed elsewhere)
- Di George's Syndrome (22q11.2 Deletion Syndrome)

- Duchenne muscular dystrophy
- Encephalitis
- Epilepsy and seizure disorder
- Genetic and metabolic disorders
- Hydrocephalus
- Meningitis
- Neurofibromatosis
- Neuroimmunological disorders (e.g., Anti-NMDA receptor encephalitis, multiple sclerosis, autoimmune encephalitis)
- Spina bifida
- Stroke, brain hemorrhage, cerebral ischemia
- Traumatic brain injury
- Tuberous sclerosis

\*We do not see patients with a primary diagnosis or presence of severe psychiatric or mood symptoms

### **Common reasons for referral**

If your patient has a primary neurological diagnosis and there are concerns related to any of the following, either from the parent report or your impression, then a referral to Neuropsychology might be indicated.

- Learning/retention or memory problems
- Attention or processing speed problems
- Executive functioning (e.g., disorganization, forgetfulness, prioritizing)
- Reduced adaptive functioning or independence with activities of daily living (ADLs)
- Emerging adult transition or post high school planning
- Risk for neuropsychological impairment

- Speech/language, fine/gross motor, and/or global developmental delay
- Social development
- Emotional symptoms
- Behavior problems (e.g., hyperactivity, impulsivity, aggression)
- Medication monitoring
- Follow up evaluation (established patient)
- Rule out autism spectrum disorder

### **Documentation requirements**

When referring your patient, please be sure to include:

- 1. Clinical notes documenting the neurological/medical diagnosis and patient demographics.
- 2. Any imaging done to support the injury, if applicable.
- 3. Copy of current IEP/504 plan and any previous psychological, psychoeducational or neuropsychological evaluation reports, if appropriate and available.

### Other resources

If your patient does not have a primary neurological diagnosis but needs a psychological evaluation, please contact our office at **404-785-2849** for recommendations.

# Primary care guideline for new-onset seizure

First-time unprovoked nonfebrile seizure assessment

The recommendations in the following guideline do not indicate an exclusive course of treatment. The intent is to build a multifaceted system of care for pediatric patients and provide a framework for clinical decision-making.

Health history is key in determining if a seizure has occurred and if it is the first episode. History should be as detailed as possible and given from a reliable observer. This will help determine what further evaluation is necessary.

### Documentation should include:

### History

- Age
- Family history of seizures
- Developmental status
- Behavior
- Health at seizure onset (fever, illness, exposures to illness, sleep)
- Past medical history
- Precipitating events other than illness (trauma, toxins, ingestions)

### Seizure characteristics

Detailed description of all aspects of the seizure, including:

- Aura (subjective)
- Behavior (mood or behavior changes prior to onset)
- Vocal symptoms (cry, speech changes)
- Motor symptoms, including, but not limited to:
  - Head or eye movements Jerking
  - Posturing Stiffening
  - Automatisms (lip smacking, finger rolling)

- Generalized or focal movements
- Respiratory symptoms (change in pattern or cyanosis)
- Autonomic symptoms (drooling, incontinence, pallor, vomiting)
- Decrease or loss of consciousness
- Duration of the seizure

### Symptoms following seizure

- Amnesia
- Confusion
- Lethargy
- Sleepiness
- Muscle aches

Headaches

- Transient focal weakness
- Nausea or vomiting

In addition a complete physical exam, a complete neurologic exam should be performed and documented.

### Lab evaluation

For patients younger than 6 months old, there is some evidence to support lab screening in the absence of specific suggested features. For patients older than 6 months old, routine lab screens are not recommended for first nonfebrile seizures without suggestive history or symptoms. Suggested lab screens include serum electrolytes, including calcium and magnesium.

Lab tests should be ordered based on the patient's clinical characteristics and history, such as vomiting, diarrhea, dehydration or persistent abnormal mental status.

- If there is any concern for drug exposure or abuse, perform a toxicology screening.
- If case suggests meningitis or encephalitis, perform a lumbar puncture.

### Electroencephalogram (EEG)

An EEG is recommended as part of the evaluation for all children with a first-time unprovoked nonfebrile seizure to determine seizure classification and epilepsy syndrome.

### **Diagnostic imaging**

The goal of the initial imaging is to try to classify the seizures as focal or generalized.

Many generalized seizures have focal onset, which is often missed but frequently associated with focal epileptiform on an EEG, and therefore will be classified as a focal seizure with second generalization.

Emergent neuroimaging is indicated for children with persistent postictal neurological deficits or for abnormal mental status persisting for several hours after the seizure. Request an urgent neurology consult.

Nonemergent imaging is indicated in children with abnormal development and/or a history of abnormal neurological examination if neuroimaging has not been done before. Nonemergent imaging is an MRI of the brain.

After the second seizure or focal seizure, a nonemergent MRI is always indicated. Children of all ages are possible candidates for neuroimaging.

### Diagnosis

Identify the diagnosis

- Dx1 seizure type: focal or generalized
- Dx2 epilepsy syndrome (remote): can be either symptomatic or genetic
  - Symptomatic: Focal lesion on imaging, intellectual disability, neurological abnormality, etc.
  - Genetic (presumptive): Absence, juvenile myoclonic, benign rolandic epilepsy, positive family history, etc.

### Recurrence

It is difficult to predict if a child will have a second seizure. Many children will not have a recurrence. Risk for seizure recurrence for developmentally normal children with normal imaging and EEG is 33%. Risk of seizure recurrence with an epileptiform EEG generally exceeds 70%.

### Treatment

If the first seizure is status epilepticus (a seizure that lasts at least five minutes), consider initiating anticonvulsant therapy. Physicians may consider providing a prescription for rectal Diastat to be used for subsequent seizure lasting longer than five minutes. Remember to provide the guardian with seizure first-aid education, instructions on how to use Diastat and directions to call 911 the first time Diastat is given.

- The protocol for Diastat AcuDial is based on age and weight:
  - Ages 2 to 5: 0.5 mg/kg
  - Ages 6 to 11: 0.3 mg/kg
  - Ages 12 and up: 0.2 mg/kg
- Doses are available in 2.5 mg intervals, so dosages should be: 2.5, 5, 7.5, 10, 12.5, 15, 17.5 or 20 mg.
- Diastat cannot be given in doses larger than 20 mg for any age.
- There is a smaller Diastat tip (4.4 cm) for smaller children (the larger tip is 7 cm).
- The syringes are available in 2.5 mg, 10 mg and 20 mgs.
   The pharmacist should lock the syringe at the appropriate dose. A green ring will appear when this is done.

### Referral is indicated for:

- Prolonged, focal or second seizures or developmental delay/ neurodevelopmental disability.
- Findings on initial workup indicating underlying etiology or true epileptic syndrome (developmental delay, abnormal neurological exam, abnormal neuroimaging or abnormal EEG).
- Patient or parental anxiety.

Documentation of medical history and physical, including all indicated laboratory, neuroimaging and neurodiagnostic studies, should be provided to the consulting physician.

### Acknowledgments

A special thanks to Kids Health First and Joann Janas, MD, for their original protocol development, which is evidence-based and therefore part of this guideline. Kids Health First has been using this protocol for several years and have experienced positive outcomes with managing their patients with their first-time unprovoked seizure.

This guideline was developed through the efforts of Children's Healthcare of Atlanta and physicians on the Children's medical staff in the interest of advancing pediatric healthcare. This guideline is a general guideline and does not represent a professional care standard governing providers' obligation to patients. Ultimately, the patient's physician must determine the most appropriate care.

If your patient has an emergent or life-threatening condition, stop and call 911, or send them to the nearest hospital emergency department.

# Primary care guideline for new-onset seizure

# First-time unprovoked nonfebrile seizure assessment

1. Obtain a detailed history, physical and neurological exam	<ul> <li>Seizure history: Age, family history of seizures, developmental status, behavior, health at seizure onset, past medical history, precipitating events (other than illness)</li> <li>Seizure characteristics: Aura, behavior, vocal symptoms, motor, generalized or focal movements, respiratory symptoms, autonomic symptoms, decrease or loss of consciousness, duration of seizure</li> <li>Symptoms following seizure: Amnesia, confusion, lethargy, sleepiness, headaches, muscle aches, transient focal weakness, nausea or vomiting</li> </ul>
2. Consider diagnostic testing	<ul> <li>Lab testing</li> <li>Under 6 months old—lab screens of serum electrolytes including calcium and magnesium</li> <li>Over 6 months old—lab screening not recommended unless suspected: <ul> <li>Drug exposure (toxicology screening)</li> <li>Meningitis or encephalitis (lumbar puncture)</li> </ul> </li> <li>Meurophysiology</li> <li>Electroencephalogram (EEG) <ul> <li>This test is recommended for patients of all ages. Inform the patient's family that a neurologist will review and interpret the EEG.</li> <li>When ordering an EEG, write "NOS" or "new-onset seizure" on the order form, and the test will be scheduled within three business days.</li> </ul> </li> <li>Visit choa.org/eegorderform to download the EEG order form.</li> <li>Menordering an MRI, order one without contrast. Indicate the reason for the exam as "new-onset seizure" or "NOS" on the order form.</li> </ul>

• Abnormal mental status persisting several hours after seizure.

3. Identify diagnosis and treatment

### Identify diagnosis

- Dx1 seizure type—focal or generalized (EEG can help classify)
- Dx2 epileptic syndrome—symptomatic (abnormal MRI or neurodevelopmental disability) or genetic (presumptive)

### Treatment

- Prescribe the rectal gel Diastat as needed for recurrent seizure.
- Provide the guardian with seizure first-aid education (turn patient on side and keep track of how long seizure lasts), instructions on how to use Diastat (if the seizure continues longer than five minutes, give Diastat rectally) and directions to call 911 after using Diastat for the first time.

# 4. Determine need for referral to neurologist

### Referral is indicated for:

- Prolonged or second seizure.
- Developmental delay/neurodevelopment disability.
- Initial workup finding underlying etiology or true epileptic syndrome.
- Patient or parental anxiety.

### Neurologists are available for consultations Monday through Friday.

- 8 a.m. to 5 p.m.
- Phone: 404-785-DOCS (3627)

Documentation of medical history and a physical, including all indicated laboratory, neuroimaging and neurodiagnostic studies, should be provided to the consulting physician.

This guideline was developed through the efforts of Children's Healthcare of Atlanta and physicians on the Children's medical staff in the interest of advancing pediatric healthcare. This guideline is a general guideline and does not represent a professional care standard governing providers' obligation to patients. Ultimately the patient's physician must determine the most appropriate care.

If your patient has an emergent or life-threatening condition, stop and call 911, or send them to the nearest hospital emergency department.

# **MRI and CT Scans**

# Guidelines for sedation

Below are our basic guidelines for sedation when referring a patient for a MRI or CT scan at Children's Healthcare of Atlanta. If you have questions, call the pre-screening team at **404-785-2483** (Monday through Friday, 7 a.m. to 5 p.m.) or **404-785-DOCS (3627)**.

### MRI

### 8-week, full-term infants to age 6

Patients will be evaluated for sedation by the pre-screening team.

### Children ages 7 and older

Sedation will be determined by the length and complexity of the scan as well as the following:

- Does the child have autism? 

  Yes 
  No
- Does the child have tics, Tourette's or involuntary movement? 

  Yes No
- Can the child follow directions?  $\Box$  Yes  $\Box$  No

Most children ages 7 and older are encouraged to attempt the scan without sedation. Children who are awake during the scan can watch a movie on our special movie screen. Children are encouraged to bring their favorite DVD.

### Adolescents

If the ordering physician and/or parent feels as though the teenager will only need a mild sedative, please write them a prescription for an anxiolytic when ordering the scan.

### СТ

### Infants < 6 months

- Most infants ≤ 3 months are excellent candidates for the feed and bundle technique. Pre-term infants may be more successful.
- The success rate for the feed and bundle technique decreases significantly for infants > 3 months and is not recommended for infants > 6 months.

### Infants > 6 months to age 5

- If the scan is performed with contrast, the child will require sedation.
- If the scan is performed with Orbit, Sella or Ear, the child will require sedation for quality imaging.

### Children ages 6 and older

Children ages 6 and older can complete most CT scans—with and without contrast—without sedation unless the child has a developmental delay or autism.

## Children's Physician Group-Rheumatology

## **Guidelines for referrals**

Below is a list of guidelines to follow when referring a patient to Children's Physician Group-Rheumatology for a consultation. These are meant to be general guidelines. If you have specific questions, call 404-785-DOCS (3627) and ask to speak with the on-call rheumatologist.

### **Conditions treated**

- Ankylosing spondylitis •
- . Behcet's disease
- Chronic recurrent multifocal • osteomyelitis (CRMO)
- Granulomatosis with polyangiitis • (Wegener's)
- Juvenile dermatomyositis •
- Juvenile idiopathic arthritis (JIA)

- Microscopic polyangiitis •
- Mixed connective tissue disease . Morphea/localized scleroderma • (in conjunction with
  - dermatology)
  - Periodic fever syndromes
- **Psoriatic arthritis** •

•

• Polyarteritis nodosa

- Sarcoidosis •
- Sjögren's syndrome
- Systemic lupus erythematosus
- Systemic sclerosis/scleroderma
- Uveitis (along with • ophthalmology)

### **Urgent referrals**

If you feel your patient needs to be seen immediately, denote "urgent" on the rheumatology referral form. All referrals marked "urgent" are triaged to help make sure patients are seen in a timely fashion. If you wish to speak to the on-call pediatric rheumatologist, call 404-785-DOCS (3627). Generally, conditions that may warrant an urgent initial outpatient visit include, but are not limited to:

- Persistent joint swelling (chronic arthritis is defined as ≥6 weeks) without antecedent trauma. Starting an • NSAID such as ibuprofen or naproxen may be warranted. We do not advocate giving these patients oral steroids prior to the initial consultation visit, as they may obscure alternative diagnoses and signs of arthritis.
- Significant joint contractures affecting function.
- Joint pain and swelling with persistent fevers (>101° F) without infectious or oncologic etiology. ٠
- A persistent malar rash with mild cytopenias, signs of serositis (pleural effusion on X-ray or pericardial • effusion on echocardiogram) or mild proteinuria (send first morning urine protein: creatinine).
- A dermatomyositis rash (i.e., persistent pink scaly papular rash over MCPs, PIPs, elbows and/or knees, or • malar rash) with signs of weakness or elevated muscle enzymes (i.e., AST, ALT, CK or LDH).

### Non-urgent referrals

There are several conditions we see that may not warrant an urgent evaluation given the available resources. These may include the following:

Chronic pain with sleep disturbances, fatigue, diffuse joint or muscle pain with normal exam, and normal CBC and acute phase reactants do not require an urgent appointment. These patients can be managed by the primary care provider with counseling or by the pain service if severe. A positive ANA test without other symptoms, exam findings or abnormal labs (i.e., CBC, ESR, CRP, CMP, urinalysis, muscle enzymes, TSH or free T4) does not change this recommendation.

Childrer Healthcare of Atlanta

- Children with musculoskeletal pain but no signs of inflammation (i.e., swelling, warmth or decreased range of motion) seldom have a chronic rheumatic condition, even if they have a positive ANA test. Consider X-ray to evaluate for fracture, cancer and consider trial of NSAIDs, physical therapy and increased physical activity. Children with prolonged episodes of intermittent leg pain at night with normal daytime activities and normal studies (i.e., CBC, ESR, CRP or X-ray) usually have "growing pains" and do not necessarily need a rheumatologic evaluation.
- Raynaud's phenomenon is a common complaint in tall, thin teenage girls in winter months. Most of these patients—as long as they do not have other concerning symptoms or exam abnormalities—have primary Raynaud's phenomenon and no underlying rheumatic disease. Labs that are helpful in evaluating these patients and could be obtained prior to referral include: CBC with differential, ESR, CRP, CMP, ANA IFA and anti-phospholipid antibodies. Make sure patients keep core and extremities warm by wearing warm gloves and socks, and by using heat packs.
- Abnormal lab findings, such as a positive ANA or positive rheumatic factor at a low titer, in the absence of objective clinical findings usually do not require rheumatologic evaluation.

### Conditions seen by other specialists

There are some conditions that may warrant the expertise of other specialties, even though joint pain might be one of their manifestations.

- **Fibromyalgia/amplified musculoskeletal pain syndrome**: For patients with chronic widespread pain where you suspect fibromyalgia, make a referral to the Pain Relief Clinic as well. The wait is often long for these patients. If they wait to see rheumatology before a referral to the Pain Relief Clinic is made, they will wait even longer to be seen in the Pain Relief Clinic. Our primary role is to exclude a rheumatic disease that might be present concomitantly.
- Non-inflammatory connective tissue disorders (i.e., Ehlers Danlos syndrome or Marfan's syndrome): Refer to the Genetics Clinic. Also consider a cardiology evaluation to screen for cardiac manifestations of connective tissue disease.

### **Referrals and medical records**

All referrals marked "urgent" are triaged to help make sure patients are seen in a timely fashion. The on-call rheumatologist is available to discuss any case or concern by calling 404-785-DOCS (3627). A rheumatology referral form is available to aid in communication of clinical data.

- Non-urgent referral requests should be faxed to 404-785-9111.
- Urgent referral requests should be faxed to 404-785-9096.

Make sure all appropriate records are faxed to our office prior to the patient's visit. This includes the office visit notes, imaging studies (i.e., X-rays or MRI) and lab results. If lab results are pending at time the records are faxed, send the complete results when available.

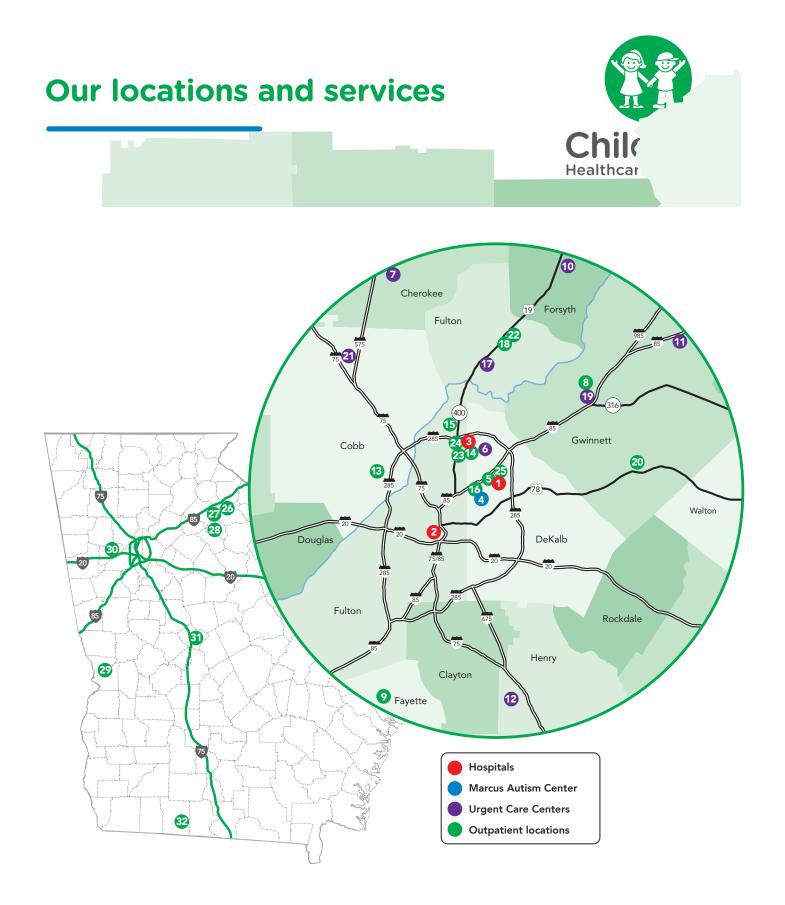

If the patient had imaging studies, ask the family to bring a CD with the images to their rheumatology appointment.

If the patient has already seen other specialists related to their symptoms (i.e., ophthalmology or orthopaedics), send these records to us as well.

## **Arthur M. Blank Hospital**

## Directions and parking

2220 North Druid Hills Road NE Atlanta, GA 30329

### Parking

The hospital has two parking decks that are open 24 hours a day. The visitor parking deck serves as the main parking deck for patient families and visitors while the emergency and staff parking deck is reserved for patient families accessing the Emergency Department and Children's employees. Handicap parking is available on all levels. Parking for expectant mothers is located on Level 2 of the visitor parking deck.

Parking is free.

### Security

Check in with the security desk located in the Welcome Pavilion. Be prepared to present identification.

### **Directions**

### Traveling on 85 North

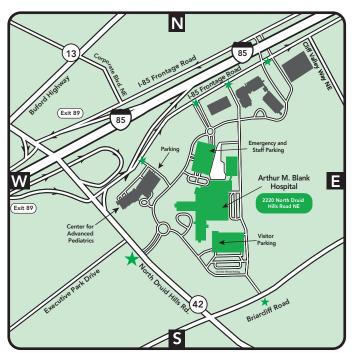

- Take Exit 89 for GA-42 S/North Druid Hills Road.
- Follow the exit ramp to GA-42 South/North Druid Hills Road.
- Turn right off exit ramp onto GA-42 S/North Druid Hills Road.
- Turn left at the traffic light to the main entrance to Arthur M. Blank Hospital.
- Follow the signs to hospital and visitor parking.
- Enter the hospital from Level 1 of the parking deck.

### **Traveling on 85 South**

- Take Exit 89 for GA-42 S/North Druid Hills Road.
- Turn left off exit ramp onto North Druid Hills Road.
- Turn left at the traffic light to the main entrance to Arthur M. Blank Hospital
- Follow the signs to hospital and visitor parking.
- Enter the hospital from Level 1 of the parking deck.

### Traveling on 85 South (alternate route)

- Take Exit 91 for US-23/GA-155/Clairmont Road/Decatur.
- Follow the signs to Access Road South/North Druid Hills Road. You will cross over Clairmont Road at the traffic light.
- Continue straight on I-85 Frontage Road (1.5 miles).
- Using the center lane, turn left at the I-85 underpass. Follow the signs towards Cliff Valley Way/Access Road North.

MAP NOT DRAWN TO SCALE

 $\star$  Campus entry and exit points

- At the traffic light, go straight to enter the Children's campus.
- Follow the signs to hospital and visitor parking.
- Enter the hospital from Level 1 of the parking deck.

### MARTA Bus\*

Arthur M. Blank Hospital is served by multiple MARTA bus routes, including the North Druid Hills Road Bus Route 8, the I-85 Access Road Bus Route 47 and the Lavista Road Bus Route 30 that intersects at the Lindbergh Center Station.

\* Routes may change. Visit **itsmarta.org** or call **404-848-5000** for more information.

- Siga las señales hacia el estacionamiento de visitantes (visitor parking).

### Tren de MARTA\* y el autobús de servicio interno de Children's (MARTA\* Rail /Children's Shuttle Autobús)

- De la línea del tren North-South (norte-sur), salga del tren en la estación N8 (Medical Center).
- El autobús 41 para en la estación Medical Center.
- Llame a la oficina de seguridad (Security Office) de Children's, al 404-785-2073 para solicitar que lo recoja el autobús de servicio interno.

Visite choa.org/locations para direcciones puerta a puerta y mapas.

Evisita tu tienda de aplicaciones o Google Play y descarga la aplicación gratuita Infantil para smartphone o tablet.

Tenga en cuenta que las obras en curso podrían afectar las rutas regulares. Recomendamos verificar su ruta para detectar posibles obstrucciones, desvíos o retrasos.

## **Center for Advanced Pediatrics**

## Directions and parking

### 2174 North Druid Hills Road NE Atlanta, GA 30329

### Parking

Park your vehicle in the Center for Advanced Pediatrics parking deck. Parking is free.

### Security

Check in with the security desk located in the atrium. Be prepared to present identification.

### Directions

### Traveling on 85 North

- Take Exit 89 for GA-42 S/North Druid Hills Road.
- Turn right off exit ramp onto GA-42 S/North Druid Hills Road.
- Turn left at the traffic light to the main entrance into Children's North Druid Hills campus.
- Follow the signs to the Center for Advanced Pediatrics.

### Traveling on 85 North (alternate route)

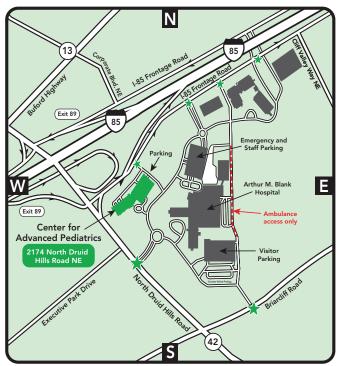

- Take Exit 89 GA-42 S/North Druid Hills Road.
- At the traffic light, continue straight to cross over North Druid Hills Road.
- Take the first right into the Center for Advanced Pediatrics parking deck.

### Traveling on 85 South

- Take Exit 89 for GA-42 S/North Druid Hills Road.
- Turn left off exit ramp onto North Druid Hills Road.
- Turn left at the traffic light to the main entrance into Children's North Druid Hills campus.
- Follow the signs to the Center for Advanced Pediatrics.

### Traveling on 85 South (alternate route)

- Take Exit 91 for US-23/GA-155/Clairmont Road/Decatur.
- Follow the signs to Access Road South/North Druid Hills Road. You will cross over Clairmont Road at the traffic light.
- Continue straight on I-85 Frontage Road (1.5 miles).
- Using the center lane, turn left at the I-85 underpass.
- Follow the signs towards Cliff Valley Way/Access Road North.
- At the traffic light, go straight to enter the Children's campus.
- Follow the signs to the Center for Advanced Pediatrics.

MAP NOT DRAWN TO SCALE

★ Campus entry and exit points

### **MARTA Bus\***

The Center for Advanced Pediatrics is served by multiple MARTA bus routes, including the North Druid Hills Road Bus Route 8, the I-85 Access Road Bus Route 47 and the Lavista Road Bus Route 30 that intersects at the Lindbergh Center Station.

\*Routes may change. Visit itsmarta.org or call 404-848-5000 for more information.

Visit choa.org/locations for door-to-door maps and directions.

Visit the App Store or Google Play to download the free Children's Healthcare of Atlanta app for your smartphone or tablet.

Please be aware that ongoing construction could impact regular routes. We recommend checking your route for potential obstructions, detours or delays.

## **Center for Advanced Pediatrics**

### Información para visitas

2174 North Druid Hills Road NE Atlanta, GA 30329

### **Estacionamiento**

Puede estacionar su vehículo en el estacionamiento del Center for Advanced Pediatrics. El estacionamiento es gratuito.

### Seguridad

Regístrese en el mostrador de Seguridad ubicado en el atrio. Tenga a mano su identificación.

### Indicaciones para llegar

### Si viaja por la 85 North (en dirección norte)

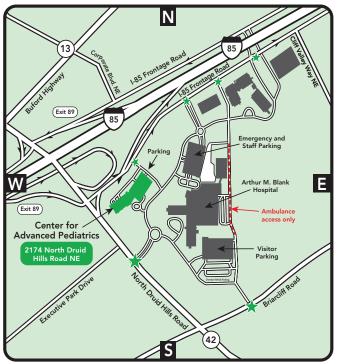

- Tome la salida 89 hacia GA-42 S/North Druid Hills Road.
- Siga por la rampa de salida hacia GA-42 South/North Druid Hills Road.
- Al final de la rampa de salida, doble a la derecha en GA-42 S/North Druid Hills Road.
- Doble a la izquierda en el semáforo hacia la entrada principal para al campus de Children's.
- Siga la señalización para el Center for Advanced Pediatrics.

### Si viaja por la 85 South (en dirección sur)

- Tome la salida 89 hacia GA-42 S/North Druid Hills Road.
- Al final de la rampa de salida, doble a la izquierda en North Druid Hills Road.
- Doble a la izquierda en el semáforo hacia la entrada principal para al campus de Children's North Druid Hills.
- Siga la señalización para el Center for Advanced Pediatrics.

### Si viaja por la 85 South (ruta alternativa)

- Tome la salida 91 hacia US-23/GA-155/Clairmont Road/Decatur.
- Siga las señales hacia Access Road South/North Druid Hills Road. Usted cruzará sobre Clairmont Road en el semáforo.
- Siga derecho por la I-85 Frontage Road (1.5 milas).
- Utilice el carril del medio para doblar a la izquierda en el paso a desnivel de la I-85. Siga las señales hacia Cliff Valley Way/ Access Road North.
- En el semáforo, siga derecho e ingrese al campus de Children's.
- Siga la señalización para el Center for Advanced Pediatrics.

MAPA NO DIBUJADO A ESCALA

★ Puntos de entrada y salida al campus.

### Autobús de MARTA\*

Se puede llegar el Center for Advanced Pediatrics a través de varias rutas de autobús de MARTA: la Ruta 8 North Druid Hills Road, la Ruta 47 de I-85 Access Road y la Ruta 30 La Vista Road que se conecta con la estación de Lindbergh Center.

\*Las rutas pueden cambiar. Visite itsmarta.org o llame al 404-848-5000 para obtener más información.

Visite choa.org/locations para obtener mapas e indicaciones de cómo llegar desde cualquier lugar.

Tenga en cuenta que las obras de construcción podrían afectar las rutas habituales. Le recomendamos verificar su recorrido en busca de posibles obstrucciones, desvíos o retrasos.

## Judson L. Hawk Jr., MD, Clinic for Children

### About our multidisciplinary clinics

The Judson L. Hawk Jr., MD, Clinic for Children—located on the sixth floor of the Center for Advanced Pediatrics—offers multispecialty outpatient treatment for children with a wide range of medical and social complexities. By housing several outpatient services together, families have a place where they can receive coordinated care. This model builds upon the clinic concept that Judson L. Hawk Jr., MD, helped initiate more than 30 years ago.

### **Our clinics:**

**Brachial Plexus** Brachial plexus birth injuries, brachial plexus birth palsy

**Cerebral Palsy/Spasticity** Motor skills, muscle weakness

**Concussion** Complex concussions

**Differences in Sex Development** Ambiguous genitalia, intersex

### Neurogastroenterology and Motility

Abdominal pain, incontinence, constipation, difficulty swallowing

### Genetics

Craniofacial genetics, developmental delay, pigmentary disorders, Café au lait spots, neurofibromatosis, autism spectrum disorders

### **Medically Complex Care**

Cerebral palsy, hypoxic ischemic encephalopathy mitochondrial diseases

**Muscular Dystrophy** Spinal muscular atrophy, Duchenne, Becker, myotonic diagnosis

Neurofibromatosis/Tuberous Sclerosis

Skin abnormalities, neurological symptoms

Revised: June 19, 2023

**Neuro Spine** Back and neck pain, herniated discs, spinal degeneration

**Osteogenesis Imperfecta** 

Easily broken bones, bone deformities, barrel-shaped rib cage, spinal curvature, loose joints, muscle weakness

**Pain** Musculoskeletal, inflammation, abdominal pain

### **Pelvic and Anorectal Care**

Hirschsprung's disease, anorectal malformations, idiopathic constipation, pelvic and spinal tumors

### Procedures

Neurology and physiatry procedure clinics

### Spina Bifida

Hydrocephalus, bowel problems, mobility weakness

### Strong4Life

BMIs outside of height and weight range coupled with weight-related illness

### **Vascular Anomalies**

Hemangiomas, capillary malformations, vascular malformations, venous malformations, lymphatic malformations, arteriovenous malformations

## accessCHOA

### Getting started

### What is accessCHOA?

AccessCHOA is a tool that provides real-time web access to patient information, comprised of different web pages or activities that correspond to different tasks. The activity that you use depends on what you want to accomplish. For example, if you want to see detailed information about a patient's lab results, you can use the Results Review activity.

This tip sheet includes information to help you get started, including browser requirements, and how to log in and log out. Each section contains information on how to accomplish the task, along with a picture of the activity for quick reference. Note that these images may differ slightly from what you see when you are using accessCHOA.

### Browser, system and connection requirements

We strongly recommend a high-speed internet connection for optimal performance. Your browser must be Java enabled, and you must use one of the following internet browsers to use accessCHOA:

- Microsoft Internet Explorer 8.0 or 11.0 (for Microsoft Windows platforms)
- Mozilla Firefox 3.0 (for Microsoft Windows platforms and Mac OS X platforms)

You also need a minimum screen resolution of 1024x768 pixels, and Adobe Reader must be installed to view documents.

### Why use accessCHOA?

This web application is designed to extend continuity of patient care by providing community physicians secure access to select patient information in the patient's medical record. Typical users are physicians, physician assistants, nurse practitioners, nurses and office staff who require access to patient clinical, demographic and insurance information at Children's.

Users must complete several steps to gain secure access to accessCHOA.

- 1. Identify individuals in your practice who will require access to accessCHOA. Note that you must identify any physician or provider for whom you would like to see patient information.
- Include all users who will need access to accessCHOA on the New Practice Request Form at accesschoa.org. Be sure to complete all required information.
  - Complete the contact information section at the top of the form.
  - Enter the first name, middle initial, last name, job title and/or practice role of each office staff member.
  - The last four digits of the Social Security number is a Children's standard for creating Epic login IDs for each nonemployed individual who will access confidential patient information.
  - An email address must be provided for each provider or other professional who will use accessCHOA. The email address is used to return the users' login information, and can also be used to notify users of certain patient events, such as a new lab result or admission.

- 3. Once all information is complete, submit the New Practice Request Form using the "**Submit**" button at the bottom of the form. Once the practice and users are approved, an email with the user's login information is generated and sent to each user.
- 4. Go to **accesschoa.org** to sign in to the web application.

Note: First-time users are asked to accept the Terms and Conditions. Click "Accept."

### How do I log in?

- 1. Enter the following URL: accesschoa.org
- 2. Enter the "User ID" that you received in your welcome to accessCHOA email in the User ID field.
- 3. Press "**Tab**" to move to the "**Password**" field. Enter the password that you received in your welcome to accessCHOA email.
- 4. After you have entered your user ID and password correctly, press "Enter," or click the "Log In" button.
- 5. You will be prompted to change your password, which is required.
- 6. When the **Terms and Conditions** page appears, read the agreement and click "**Accept**" to acknowledge your agreement with the terms. You are now logged in to accessCHOA.

Note: Terms and conditions will appear when they are updated and on an annual basis.

7. You may be prompted to identify a department when logging in to accessCHOA. If you see this screen, click on the magnifying glass,

and choose the accessCHOA department.

Please	make a selection				
Login Depart	ment: Search				
Search Mat	ches:				
D		Center	Specialty	Location	Service Area
411100	ACCESSCHOA				
210000	SUP OPENES IN EGLESTON			CHILDREN'S HEALTHCARE OF ATLANTA AT EGLESTON	CHILDREN'S
220000	CHILDREN'S AT SCOTTISH			CHILDREN'S HEALTHCARE OF ATLANTA AT SCOTTISH RITE	CHILDREN'S

If this is the most common way you log in to the system and would like to have accessCHOA as your default department, contact us at **404-785-6767** and we can make that change for you.

Note: If you see patients at our facilities and log in to "**hyperspace**," any changes to your default department in accessCHOA will change your department there as well.

### How do I log out?

To maintain patient confidentiality, you need to log out, or use a secure screen when finished or leaving the computer for any reason. There are two ways to do this:

- 1. Click to log out of accessCHOA. The next time you log in, you are directed to your start page.
- 2. Secure the computer by clicking secure. When you log back in, you are returned to the same page you were using before securing the screen. There is no need to navigate back to the page you were previously working on.

### Show time-out warning

After **20 minutes** of inactivity, your accessCHOA session will time out. If your session is about to time out, a warning message appears in the application banner. Until you perform an action, such as clicking on a page or typing, the session times out.

### What if I forget my password?

See your site administrator or call the solution center at **404-785-6767**.

### Help and contact information

For help using an activity, click 🔘 on the web page.

Additional tip sheets can be found within the accessCHOA application on the training page.

Contact the Children's Solution Center at **404-785-6767** if you have any questions or concerns.

### MRI/MRA

### MRI head, neck, spine

Protocol or area of interest:	
MRI brain w/o	70551
MRI brain w/	70552
MRI brain w/ and w/o	70553

# Sports medicine physician vs. sports physical therapist

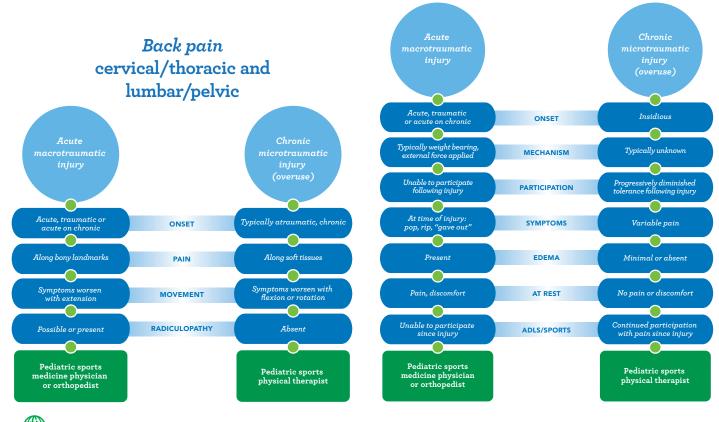

### Your reference guide

Use these guidelines to support your clinical decision to refer a patient to a pediatric orthopedic physician or a pediatric sports physical therapist. Follow the center categories and choose the appropriate corresponding column based on your patient's case history. If the majority of responses fall in the acute macrotraumatic injury column, we recommend the patient see an orthopedic physician. Conversely, if most responses fall in the chronic microtraumatic injury column, the patient may be sent directly to sports physical therapy.

### About our Sports Medicine Program

When it comes to treating growing athletes, there's no competition. Our Sports Medicine Program is dedicated exclusively to caring for growing athletes. Our sports medicine professionals, including sports medicine primary care physicians and sports physical therapists, are trained specifically to take care of kid and teen athletes. We provide complete, coordinated care from diagnosis to treatment to rehabilitation. We have 14 orthopedic and sports medicine clinics, and offer sports physical therapy at 11 locations across metro Atlanta.

### *Extremity pain* upper/lower extremity

To make a physician referral, choa.org/md or call 404-785-DOCS. For sports physical therapy referrals, call 404-785-8660. See our locations and providers at choa.org/sportsmed.

If your patient has an emergency or life-threatening condition, stop and call 911 or send them to the closest hospital emergency department. This guide is for informational purposes only. Providers must use their own clinical judgment in referring their patients, as each situation is different.

Children's Healthcare of Atlanta at Hughes Spalding is owned by the Fulton-DeKalb Hospital Authority and managed by HSOC Inc., an affiliate of Children's.
