During today’s visit, your child will:

• Be seen by a healthcare professional.
• Have his or her symptoms evaluated.
• Be diagnosed and treated based on symptoms, age, medical condition, likelihood of the flu and time since the onset of symptoms. Not all children will require a flu test.

Treatment for pediatric flu is different.

We reserve flu testing for kids who:

• Are younger than 2.
• Have compromised immune systems.
• Have pulmonary or cardiac issues.

Medication guidelines for flu treatment are different for kids.

Your child isn’t guaranteed to receive antiviral medicines, because they’re not beneficial to all children*.

• Antiviral medicines, such as Tamiflu, carry a risk of side effects.
• For many children, the risk of side effects of antiviral medicines outweighs the benefits.

*Physician practice is based on clinical judgment and is in alignment with recommendations from the Centers for Disease Control and Prevention (CDC) and American Academy of Pediatrics (AAP).
